with DOS i get memo pad & hit F12 to return to basic. i loaded X25 &
basic works better
but all the directions to SAVE do not work.

error 130 is 'unknown device'.
it means you don't have DOS loaded at bootup.
(DOS disk operating system).
You don't have a 'D:' device handler, because you haven't
loaded DOS.
To load DOS, you need to "put a disk in drive 1", using the menu items with
the emulator.
The disk you put in is called an image, with a .ATR
extender on the end, eg. MYDOS453.ATR or
FRE32G.ATR or DOS25.ATR.
You can get a DOS image at the Holmes archive at
www.langesite.com/atari/holmes and search for
DOS images.

Mostly what Russ said. Error 130/Memo Pad means the emulator could not
find the DOS image disks in the default directory.

I'm not to familiar with Xformer but I think it defaults to booting
the first disk image with the .ATR extender and the same directory as
the emulator.

So you want Xformer.exe or .com or whatever it is in the same directory
as a disk image. The disk image will probably be a 90k MS DOS file named
something like

DOS25.ATR

or a 180k file that has a double density DOS on it.

REALLY Foggy memory but I *think* in some of the early MSDOS versions
you had to specify the file in the command line i.e.

Xformer DOS25.ATR<RETURN>

Once you get the DOS loaded, you should be able to just type
DOS<RETURN>
 From BASIC and it will load a file called DUP.SYS which stands Disk
Utility Package and has all the commands to do things like format a disk
or load a binary file.

If you get that far, you should be able to get back to BASIC by using
the RUN option of the menu with the run address $A000.

If you want to go back and forth between BASIC and DUP, you need to
create a MEM.SAV from the DUP menu. Most people don't bother since you
can perform most of the functions you need from BASIC.

The disks images I have seen are usually pretty full. You may have to
create a new one with only DOS and DUP on it to have room for your programs.

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

ABOUT THIS DOCUMENT

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current, michael@mcurrent.name

The latest version of this document is posted to these Usenet newsgroups every 7 days:
comp.sys.atari.8bit, comp.answers, news.answers

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
net.micro.atari8 - created Feb 1986
net.micro.atari - created Nov 1982
net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

The ROM test indicates a red bar on the ROM on the right ROM in self test.
Does this indicate a specific ROM or is it just a blanket "you have a bad
ROM somewhere"?

TIA

Thomas

I think there are only two physical ROM chips in an XL/XE.

One is the OS and the other is the BASIC interpretor. What I don't know is
if the ROM test is just the OS ROM or both the OS and the BASIC ROM.

This is off topic, but this is the only message I have in Outlook Express.
It puzzles me, I want to keep all messages, but periodically, as has
happened just now, all messages except one dissappear!
I have 'Don't synchronize.' set for all my groups.
These strange messages seem to preceed the wipeout of my messages,

something like 'cmesage cancel... blah blah.
It doesn't work to unsubscribe and re-subscribe.

If the emulator simulates a tape drive, the C: device is part of the OS,
so you could do CSAVE or SAVE "C:" :^)

Additionally, you could do something silly like LIST "P:" if the
emulator's printer 'device' has been redirected to a file. Then you'll
at least have an ATASCII dump of the listing which you could then load later
using the ENTER command.

;^)

Does anyone have a copy of the XEGS ROM (OS, Basic, Missile Command) they
could e-mail me? I need to reburn a ROM as mine is failing. TIA

Thomas

I had a gecko (small lizard like reptile) in my STE once. That was
back when I lived in the tropics. Unfortunately it got fried on the
PSU as I was playing a game (I had no idea it was in there). Smoke
started coming up from the STE's vents while I was playing and I
panicked and shut the computer of thinking I fried a circuit or
something. Imagine my surprise when I open the computer up to find a
scroched gecko lying on the PSU. Poor little thing... geckos are cute.

Joshua.

Remember, this and all the currently active Atari BBS's are available at the
Atari Gateway...

telnet://pb.darktech.org

Get to the main menu, x for internet, A for Atari, and all the Atari BBS's are
listed there.

I believe when you reach ST Guild and Dark Forces you need to hit return,
otherwise nothing will ever show up.

Just thought I'd let everyone know, I'm having trouble with my UDS10.
Whenever a call comes in, it acts like it accepts it, then the red
diagnostics light comes on, and the call will not continue...

So we might be temporarily unavailable until I can figure out what is
going on with it.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
net.micro.atari8 - created Feb 1986
net.micro.atari - created Nov 1982
net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

Say you had someone that was outside of Oregon that needed to find a home for
Atari items, would you still accept those? How do you handle shipping?

Doc Clu
Dallas, TX- USA

> From: Bravo Sierra Computers <atari@aracnet.com>

Hi and tnx for reading my message.

I've renctly played a game called "New York City" where you drive a car
and if you park it, you play a little guy.... but after playing a while,
I still don't understand what I need to do ?!!!

Any help will be appreciate.

tnx in advance

T0M

```
        * THE BIG APPLE *
              (NYC)

OBJECTIVE:
----------

  As a visiting tourist, you must visit
12 locations in New York City within a
specific amount of time. The locations
are:

     LOCATION             SYMBOL
     --------             ------
EMPIRE STATE BUILDING       ES
UNITED NATIONS BUILDING     UN
GRANT'S TOMB                GT
WORLD TRADE CENTER          WT
CITICORP CENTER             CC
CITY HALL                   CH
CENTRAL PARK ZOO            ZO
POST OFFICE                 PO
AUTOMAT                     AU
MART                        MA
BANK                        BA
SUBWAY                      SU

  The BANK and the SUBWAY are always
open during the game. All other
locations are open only when you see
their two letter symbol at the top of
screen under SIGHT. In addition to
these 12 locations, you will see 3
other locations:

LOT: You must retrieve your car from
     the lot if it is towed.  To get
     your car back you must pay $90+$20
     for each 7.5 minutes on the game
```

clock.

GAS AND GARAGE: If you are involved in an accident or run out gas, your car will be brought here. When you pick up your car, your tank will be full and you will be charged for the gas and $50 to $350 for repairs. You may buy gas voluntarily by parking and then going into the building and position the man in the top center of the screen. Then hold down the fire button and your gas supply will go up. You will be charged $1 per gallon.

HOSPITAL: If you are hit by a vehicle while walking, or if your car is hit by blue tow truck you will be brought here to recuperate and will be charged $200.

Each time you start the game, all locations are randomly placed except for:

ZOO : Always in Central Park.
GARAGE: Always at the east end of Central Park
SUBWAY: Entrances are always on the street that runs along the south edge of Central Park.

DRIVING THE CAR:

Your car is the blue car in the center of the screen. You can drive it forward by moving in the desired direction the car is facing. To stop, simply release the joystick. You can turn 45 degrees from your current direction by moving the joystick in the desired direction.

If you park your car and your meter expires, you will get a 'METER EXPIRED' message.

If you run out of gas or your meter expires, your car will be towed to GAS AND GARAGE, and you will become a pedestrian if you weren't already one.

BEING A PEDESTRIAN:

To enter any of the 12 locations you must visit, you will have to get out of your car. Getting into an accident with the blue tow truck will get you out of your car automatically. A better way is to pull into parking space or parking space or parking lot and push the joystick button. Pushing the button will get you out of your car only when you are legally parked or out of gas.

To enter a location, just walk in the front door. If you don't disappear in-side, you are not lined up with the door. To get back into your car, stand on the left end of the car and push the fire button. If you leave your car parked too long, the tow truck will come to tow your car away to the lot.

THE LOCATIONS:

Empire State Building (ES), United Nations Building (UN), Grant's Tomb (GT), World Trade Center (WT), Citicorp Center (CC), City Hall (CH). These six locations have the same objective but each one will be successively more difficult. You must make your way to the top of the grid of platforms and ladders, grab the pretzel or key, and exit the bottom of the screen without running into the men who are chasing you.

If you get caught, you will lose $50 and have to start again at the bottom of the screen. The two men who are chasing you can bridge the gaps which might be present. You must try to lure the men to the necessary place.

CENTRAL PARK ZOO:

Someone has let the animals out of their cages at the zoo! The animals must be put into separate fenced areas.

To lay a fence, hold down the fire button and move the joystick. You must fence each animal so that it is completely surrounded by fencing or walls. You may freeze caged animals by moving to the top of the screen and pressing the fire button. Each caged

animal will then be frozen and $25 dollars will be deducted from your money. You must freeze all the animals to complete this segment of the game. BEWARE! The animals bite (including frozen ones) and each bite costs you $50 and you must start again at the top of the screen.

POST OFFICE:

The Post Office is the most difficult of the locations to complete. The object is to grab the letter, place it on the empty stamp pad, wait for it to be stamped, take it off the stamp pad, climb up the ladder and put it into the white mail box at the top of the screen.

The Post Office is divided into several colored bands. You must use the fire button to jump from one color up to the next. To move down the screen to a different color, simply move the joystick down.

Your first task is to get the letter you are trying to mail. You must chase the letter and jump if necessary to grab the letter. If you miss, you will be charged $50 and have to start over at the bottom of the screen.

You must next get through the moving mail carts and past the dog to the stamping pads. Touching either the mail carts or the dog will cause you to start again at the bottom of the screen. Since the dog will follow you, try luring the dog to the far left of the screen and then dash to the right while avoiding the mail cars. Your letter must next be stamped. To do this, position yourself next to a stamper. Wait until your stamper stamps and then jump onto the pad and quickly get out of the way. If you fail to get out of the way, you will also be stamped, lose $50, and have to start over. If your letter is successfully stamped, you will start with your letter on the stamp pad any time you are forced to start over.

Next you must take your letter off the pad and put it into the white mail

box at the top of the screen. You must retrieve your letter from the pad by jumping onto the pad. You must then jump onto a ladder and ride the ladder until you can drop your letter into the proper mail box. You may not ride a ladder off the edge of the screen, so it may be necessary to move off a ladder temporarily. To do this, move your character down off the ladder by moving the joystick down. Be sure you do not exit onto a stamper!

Once your letter has been dropped into the proper mail box, you must make your way back to the bottom of the screen while avoiding the dangers you have just passed. You must repeat this process with another letter to complete this location.

AUTOMAT:

At 10:00, 2:00, and 6:00 on the game clock, IT'S MEAL TIME will appear. All locations except the automat, bank, gas and garage will then close until you complete the automat location.

The object is to eat 10 hamburgers. You can order your burgers by moving to the top of the screen and pressing the fire button. Each time you press the button you will be charged $20 and a burger will appear on the screen. You must catch 10 burgers while avoiding Felix Hunger who also has designs on your burgers. Getting bit by Felix costs you $50.

When you have ate ten hamburgers, congratulations! You are done.

I know, I am getting old. Never even seen this, but then again, I don't have
all Antic's. Anybody have a clue on where to get it? Ben Smith? You got it?

Man I loved that game when I was a kid. Played it to death. Up there
with Star Raiders imo.

Mark

I don't know of any of the emulators that emulate an XEP-80. Remember that
the XEP-80 is an external device that the Atari talks to over a joystick
port. To emulate this, one would need to build emulation of this device and
its connection to the joystick port into the emulator.

It would be a very cool addition to an emulator. The XEP-80 could be
emulated as a seperate display window from the main display.

Was there ever any clones made of the Atari 8bits? The Apple][, Timex
Sinclair 1000, TI 99/4a had theirs (not sure about commodore though).
Did Atari have any?

Bill H

I wonder if you could have cloned the Antic chip? Can you replicate it
using dicrete logic chips like you can the ULA (similar purpose on the
TS1000)?

For the Apple, there were some remarketed //e|//+ machines made by Bell and
Howell for the schools. Then there were the Laser series which were completely
a clone but licensed the prom from Apple. As for the atari, I've never heard
of a cloned machine as availability seemed to be good in the places it was
marketed. But as another poster said, maybe there were russian counterparts
made tho I find it unlikely as the commodore really had a big influence
overseas.

The Atari 8 bit machines and also the C64 used too many and too complex
custom chips to easily clone them. That's why it never was done.

At the time and I think it was at least half to do with proprietary
chips at Atari vs. the available chips in some of the others.

Just as a ~loose example: The TI99/4 used a video chip that was marketed

as a separate chip and the manufacturing was licensed to other companies like Yamaha. Some flavor of the chip found its way into Coleco Vision/Adam and the NES. Circuit Cellar even made a board for the Apple II.

The TI chip was a display chip with its own RAM and refresh circuitry. It had the capability of sprites vs. P/M graphics and if you recall the NES and Coleco Vision games of the era, was quite capable.

The NES on a Chip devices that are commonly sold for <$20 in toy stores clone both the 6502 and the 9930<?> video chip. If they can clone a 6502 processor, they surely could clone an Antic video processor and GTIA.

Personally I think it would make some sense to do. I mean some of those games that come with the NES on a chip are really lame. Stock shoot 'em up Scramble clones abd scrolling racers similar to River Raid. I would much rather play something like Start Raiders myself if they could get around the keyboard controls needed.

Rick

While the commodore 64 when it was released was $595 and the Atari 800 was
priced around $999. I am sure could not be true. I do know that the
Commodore 1541 was a slow drive. We could ask some Commodore users, but I do
not think they have upgraded to PC's yet because they are still trying to
load games the got from 82 that have taken all this time to load.

Ofcourse. Speccy was mostly cloned because it could be built from the
soviet Z80 clone + standard TTL components.

> If they can clone a 6502 processor, they surely could clone an Antic
> video processor and GTIA.

The 6502 only has a few thousand transistors. It's a very small and
simple circuit compared to (for example) the SID or the VIC of the
C64 which have several times more transistors. Also it was a matter
of what the military needed. It was soviet zone, everything which
was high tech was developed for the military, and they needed CPUs
but they didn't need sound and video chips for games.

Of course. It's only a chip.
Mostly digital, with a bit of analogue.

I've got the POKEY sound logic running in my FPGA.
I've got a VHDL video controller that has cycle timing based on the ANTIC, I just need to add logic to change modes based on the display list...

Highly unlikely. The Atari was a damn expensive computer to get into
compared to most of it's rivals.

BTW, it's kind of pointless starting a topic with a 4-day expiry.

Obviously, a "standard string of numbers" is referring to the
predictable sequence that seeded RND() functions generate.

The C-64 just like the Atari has a hardware function to generate
better "random" numbers - it provides the amplitude output from Voice
3 (which obviously has to be set to white noise to generate random
numbers).

The difference with BASIC is that the Atari utilizes the hardware and
the C-64 doesn't, since it's BASIC is virtually unchanged from the PET
days.
The Atari just reads $D20A and throws out values that aren't valid BCD
numbers.

You can, but it is a highly complicated thing to do. You would need
as much ICs for replicating an Antic with TTL and other ICs as you
would need for the entire rest of the computer.

I remember that some Amiga prototypes used TTL logics to simulate
the Amiga blitter and other custom chips. Every simulated chip
had an entire PCB with lots of logic on it.

Another problem is that it's not that easy to reverse-engineer
complex chips like Antic. It takes a lot of work to reproduce it's
exact behaviour in every aspect, and as I said: This work was only
done if the military needed it.

FWIW: I just had another foray into the wonderful world of micros. Last time, circa 2000, I had trouble even buying chips or getting a manufacturer to return calls or email. I think I was 0 for 20 or so.

About the only thing I could find was obsolete DSP chips and $600-$7,000 developer kits. I think everything was being sucked up by the cell phone manufacturers.

Anyway, I am revisited the H8 since I have 3 or 4 working systems and just bought a working GPS board with an ARM processor. I checked with Digikey and both processors are available and at least for one, a <$60 developer kit is available.

Both of the processors I am looking at are 16 bit and various flavors of C are available free or with the developer kit.

I may not have the details exactly right, but the H8 is a derivative of the 68000 and Hitachi even sued Motorola for using some of its advanced technology in the 68030. Fast puppy anyway, 25mHz with 512k flash and 16k RAM for less then $20.

Point being in the H8 case, most of the integration you would need to make an Atari is already there. Comes with I/O lines that could do everything from read keyboards to D/A and A/D to do sound and controllers. If Xformer could run on a 8 mHz ST, it should be a lock to do with something like the H8.

The ARM I got with the GPS board is interesting on a couple of levels. It has ~the same processing power as a 386 and is in circuit programmable/upgradeable. Most of the stuff I said about the H8 can be said about the ARM too plus a low price of ~$5 each. It is a RISC processor so it is the equivalent of an evolved ANTIC. People have hacked PIC and Atmel microcontrollers to do VGA graphics after a fashion. If an 8 bit PIC can do it, you just know an ARM can do it better.

At this stage I don't think we want want perfect clone as much as
current technology. I mean I have a bunch of Atari computers so why
would I need to buy a another one? It had better do several things
better then the original like use less power or have better video output.

IMO, the next iteration would be to go the emulator route. Use something
like Linux to bootstrap an emulator. It's a lot easier to add "hardware"
to an emulator. Since old Pentium's are so cheap, this would allow the
Atari 8-bit to live on. Plus, the emulator can be ported to all sorts
of operating systems.

Is there any emulators that support dual GTIA chips? 80 Column hardware?

Just my op but I like the idea of a low power system, maybe .5 Watt so
it could be done with batteries.

There's a small footprint linux for portable devices, used on cell
phones and GPS<?> systems, but I worry it will go the same route as the
other OS. With very few exceptions, when I look at someone else's code I
can't figure out what they are doing which is scary. I'm not your
average idiot, I consider myself and standout idiot!<grin> I aced C
programming when I took it so I think people are deliberately trying to
create obtuse code to be cute.

I took a look at the old ST Xformer for reference. It was only ~127k of
mixed C and ASM code and ran ~80% the speed of a real Atari. Micros with
more then that amount of flash are common now. You could do 40 mHz ARM
with 512k flash and have everything but the variables in flash including
anything Atari you wanted like OS and BASIC ROMS. Most micros don't have
a lot of RAM, maybe 2k-16k on chip. That isn't a lot but it could get a
minimal system going w/o having to add an external RAM.

> Is there any emulators that support dual GTIA chips? 80 Column hardware?

Currently, not really. As for dual GTIA, please propose a duable and
realistic hardware design how to fit two GTIAs into the system - where
for example is the data input of the GTIA coming from? Dual ANTIC? Where
are the memory cycles coming from to feed it?

As for 80 column output, there are a couple of preparations in Atari++
to make this possible hopefully in the near future, I'm just lacking
proper documentation for the XEP-80 to really do it right now (see the
xepbuffer classes). The second question would be how much software does

really profit from this, so is it worth the trouble.

So long,
     Thomas

What would you need for that? The driver source that came with the
XEP-80? The XEP-80 itself?

Bye Jochen

Hello,

I have just released a new set of items. The EASI/O SPIDER. it is a

professionally made circuit board that holds up to 4 SIO jacks and/or 5
SIO cables. With other features including an EASI/O port, internal
upgrade header, prototyping area, and external power support.

Available in pcb only for $12.00 +Ship/hand/tax/paypal fee, thru
assembled kit.

View the information
at...www.a8maestro.com/sites/mtgcat/proda8/a8-p1.htm.

Please see the current email on the page for any questions.

More new Items coming this summer.....Stay tuned.

Thanks,

Rick D.

When Atari released the 600/800xl, did they ever release a translator
tape for those who didn't have a 1050 drive?

Bill H

I don't think Atari did it, probably some user
made the Cassette version from the disk.
I'm pretty sure it is TRANSLAT.CAS available
at www.atarimax.com down the page in the APE/PRO area download APE118d.zip.
APE for DOS area.

I said where to get TRANSLAT.CAS, at atarimax.
But, hmm.... How to use it?
You might be able to use it in emulator, but why do that, just use the 800
OS?
You might be able to, in FTeDOS:
COPY D:TRANSLAT.CAS C: after booting
from APE. But if you have APE working, why need a CAS file? It is possible
APE118d supports a CAS file like it does ATR files.
OK, I'm trying to present a solution without knowing what the problem is.

Well,
Atari themselves did NOT release a translator tape. But some Atarians
did, because so many versions of the Translator were floating around, it
was treated as being "PD". I would look for a translator version, that
supports both Disk + Tape boot (e.g. Power-Play, Ultra-Translator, etc.)
or even Disk + Tape + Cart. boot (like Ultra-Translator)... -Andreas Koch.

> just a crazy thought!

Bob Wooley did this and published results in the SLCC. IIRC the 2nd GTIA chip had its own RAM so you could effectively display 16k of screen memory vs. the stock 8k like a GR. 15 screen. It was set up so the GTIAs could take on separate commands, like one in ~16 color mode and the 2nd in 16 lum mode to give 160x200 in 16 colors at 16 lum levels.

He also added a 6545 to get 80 column screens in another issue.

He also added a 65816 which reminds me I still have to dig under a ton of my S.O.'s crap to get out my 800 for some testing.

It was a real valiant effort but the rest of the pieces never came together. Very limited tool set available to take advantage of the hardware enhancements i.e. MAE assembler supported 65816 while MAC/65 only supported 65C02.

Then there is the terminal cheapness, myself included, of the Atari community. Soon as you say "I need 10 people to commit to buy the first 10 boards at $50 each" the silence is deafening.

In the dozen or so years I have been reading this group I have formed an opinion of what it would take to get them to purchase a revised Atari 8 bit. People pretty much expect 100% backwards compatibility with Pentium speed and VGA graphics on demand. You have to run PacMan at normal speed but Atari BASIC 1,000 times faster. You also have to put up with ~"I have a 30 meg SCSI" and "I want it to work with my 40 meg IDE" types who are too cheap to buy a used $5 drive and get offended if you don't have exactly what they need. It is a tough market.

Rick

I remember at least one of the BBS programs on CIS archives was busted.
Had something like over 500 down loads and was never reported before I
caught it. Could have been AMIS or Forem or one of the other popular BBS
programs at the time.

AMIS was really a mess. Spaghetti code that was impossible to follow,
hacked and corrupted by dozens of hands, maximum effective speed of
~1200 BAUD. I can remember it taking so long to load the buffer from
floppy, XModem would time out. I think I solved some of my problems with
it by putting down loads and menu system on a 192k ram disk which was a
problem in itself.

IMO: You would really be better off if you got a hold of one of the

other programs like Carina if you want BASIC or BBCS if you just want
something that mostly works.

Rick

Sorry to differ, but I tried both Carina and BBCS.
BBCS was a disaster, from Antic. If I remember I got two or three 'patches'
to BBCS and they still crashed often. Carina was somewhat better, and very
interesting because you could write code to use in it.
BBS Express was rock solid. BBS Express is now in the public domain. BBS
Express Pro! is still sold by Lance Renquist at Video 61, and used in
present day BBS's.
I believe Tom Hunt still supports Pro.

I'll defer to Express being the best choice and something I should have
mentioned.

BBCS was ok after you tinkered with it a bit. I can't recall all the
problems but certainly error trapping wasn't what it could be. It
allowed to do things like create a menu heading that you didn't have a
menu for. I bought a printer just to print out what seemed like 40 pages
of docs. Anything you need 40 pages for documentation is not going to be
user friendly!

REAL FOGGY
As the disk was supplied, the duplicated disks all contained truncated
file error or some such for the message base compaction program.

That being said, after about 6 tries at 'construction' I got a version
that worked OK and was fairly stable on a minimal system: Two 188k
floppies and a 192k ramdisk under Sparta DOS. I think I just ran it with
a 1030 with a J/S ring detector hack.

Rick

Ahh. You were using a 1030. That could explain its' funtioning. I'm sure
by the time I tried BBCS, I was using a avetex (?) 1200 baud modem. I think

I was shopping for a BBS system software because I changed from my MPP 300 baud joystick port AMIS MPP, (now who wrote that? I bought it.) I also tried Carina, and it was somewhat unstable. I finally spent the $50 (I think) and bought BBS Express from Keith Ledbetter. It never caused any problems, always worked. I didn't have a UPS, but I made my BBS so that if there was a power out, I batch filed about 4 floppy drives and a 1 meg MIO to come back online as soon as power was restored.
I considered my batch file, in SpartaDOS, to be a really neat capability of the setup.

It is my belief that archives like this one should be provided without any limitation to the end users ability to utilize the archive. These archives are getting harder and harder to find and because of that we all should do what we can to let those who want to mirror our archives do so. As such I am now bringing this archive to the vintage computing community. I have not and will not put any limitations on how users can utilize the archive provided here. Users can freely download as much or as little of the archive as they want. Users can also freely contribute as much or as little to the archive as they want. This way people will be able to mirror the archive easily which will help ensure the files contained in this archive have a nice long life span. This will also allow this archive to grow freely and become an ever increasingly useful resource to fellow vintage computing hobbyists. It

is my hope that people will take advantage of the great disk space and bandwidth provided here and both contribute to and download from this archive. This will allow users to have a good solid place to go whenever they are in need of a file for their vintage computing hobby. With the resources provided here it is my hope that with others contributions and utilization of this archive that this will become a great resource for all vintage computer hobbyists. That's right, there is no certain vintage computing era this archive is limited to (except the 2000+ computers and their related files), as it is my hope that this becomes a great central archive of everything vintage computing. A resource that makes the vintage computing hobby easier and less intimidating by not requiring hobbyists to go all over the internet for the files they need. Hopefully someday this goal will be met for the benefit of everyone who enjoys vintage computing as a hobby. Enjoy! :-)

FAQ

Where are the files?

The files are hosted on a KDX server. This provides me with an easy to administrate server and it provides everyone else with a nice, easy to navigate, server with which you can download/upload files and chat. If you don't know what KDX is click here for details on what KDX is and how to use it as well as download links for the client. To connect simply use kdxvcfa.dyndns.ws as the address, a username/password is not necessary.

What about http/ftp access?

You can still access the archive via http by clicking here, however note that the http copy of the archive will no longer be updated. Instead it is highly recommended that you use KDX to enjoy the latest additions to the archive. The same goes for ftp uploading, please upload via the Uploads folder in KDX instead as the archive will now continue to be maintained only via KDX.

Why the change to KDX?
Http access was great for a while. However, http access was being donated and as such disk space was limited. The donated disk space is now getting tight and as such I had to think of alternative methods of keeping the archive online. The best way I could think of was to host the archive myself since I have a bunch of HD's here which thus provide plenty of disk space for the continued expansion of this archive. I could easily have setup http access myself but I thought that since I was doing the hosting myself I might as well use KDX. Why? It's easier to administrate, the administration interface provides many easy to utilize controls for what users can and can't do. It has everything for the makings of a community, file browsing for downloading/uploading, a chat room, private messaging support, and a news section. In addition KDX is completely free and has clients for

all the best operating systems: Linux, Mac OS, and Windows so no matter what OS you use you can still enjoy this archive. So now the archive is being provided and maintained via KDX.

How can I contribute to the archive?

To contribute to the archive simply upload your files in the Uploads folder

To expedite the sorting of uploads please do the following when uploading files to the archive:

* Look for a folder corresponding to the type of computer your files are related to (Apple, DEC, Commodore, etc)

* If one exists go in it and place it in the correct category sub folder (e.g. Utilities, Multimedia, Office, etc)

* If the folder corresponding to the type of computer your files are related to doesn't exist or the correct category subfolder doesn't exist create it and place your files inside of the folder (if you create a category subfolder for a category that doesn't exist publicly and your files are determined to be able to be legally hostable, the new category will be created publicly with your files inside of the new category)

This will help speed up the sorting of the uploads by avoiding mess and clutter as much as possible. Thanks! :-)

Uploaded files are not instantly made publicly available as it is necessary to review the files for possible legal issues which could prevent them from being able to be shared publicly on the server, the upload folder is checked daily and any newly uploaded content that is deemed legally sharable (e.g. abandonware and/or software which was made by a company that no longer exists or still exists but has long since abandoned the software and does not care if the software is shared) will be sorted in the appropriate publicly accessible folders.

What era or type of vintage computer related files are allowed in this archive?

There is no specific era or vintage computer that this archive is restricted to as long as the file(s) don't relate to any computer made in 2000+. It is my hope that this becomes a great central archive of everything vintage computing. A resource that makes the vintage computing hobby easier and less intimidating by not requiring hobbyists to go all over the internet for the files they need. Hopefully someday this goal will be met for the benefit of everyone who enjoys vintage computing as a hobby.

Why should I contribute to/download from this archive?

This archive is unique in that it is maintained with the belief that there should be no limitations in place for how one can utilize this archive. This archive is hosted on a server with 200GB of disk space and 2.8TB of monthly bandwidth, this ensures that everyone can enjoy the archive equally. In addition this archive is hosted in a state of the art data center in the USA, this means that the server has high upload and download speeds, something not every vintage computing archive has unfortunately. The high bandwidth and disk space available for everyone's use ensures that everyone can equally enjoy this archive with nice fast speeds both up and down. This in turn makes it easy for people to download the files they need and for people to contribute to this archive without spending a lot of time doing either. In addition every file uploaded is backed up locally so that if the hard drive in the server goes bad the files will not be gone and can easily be reuploaded (and they would be as soon as the hard drive got replaced). Not only that but because I encourage people to mirror this archive you can rest assured that I will not be the only person with a backup of this archive so that these files will have a good, long life span.

Do you backup the archive?

Yes I sure do. Every time I check for new uploads I backup the uploaded content locally onto two hard drives.

Can I download the entire archive?

Yes! You certainly can using something like wget. I do not believe in limiting the potential of these types of archives as explained above and as such there is nothing stopping you from downloading the entire archive. In fact I encourage people to mirror this archive as it'll help ensure that the files stay around longer. Also note that while we won't stop people from downloading the whole archive for their own personal use (i.e. they have no intention of later sharing the archive with others) it is preferred instead that in this case files are downloaded individually as needed.

What can I do if I find one or more files that are wrongly categorized?

Please email me at hexstar@gmail.com with the location of the file(s) in question and the location where you believe they should be moved to.

How can I contact you?

You can contact me at hexstar@gmail.com

It's not so much as I'm looking for a specific BBS to run - it's that
I want all of them ;)

I ran a superhacked AMIS (as did most of us at some point, I assume) -
later I switched to Express, and somewhere in there Oasis Jr.
Most of my friends ran Carina, Oasis III and IV, or just bit the blue
bullet and ran the bbs on an IBM clone of some kind.

I also had the ring detector.. I thought that was the cleverest thing,
course, I think I was 11 or 12...

This all sounds so good. If it every came out, I would buy one. I would love
to run all my Atari 8-bit software on this. How about adding compatibility for
running 16-bit software also. That would be the icing on the cake.

Anyone have a program to extract the BASIC SAVEd
file out of a boot the file .ATR? I believe there's a BAS2ATR.EXE file for
PC's to put the BAS file into a boot ATR, but is there an extractor?

Russg,

The file I use a lot is ' UNMAKATR.EXE ' will extract bootable basic .ATR's.
By Ken Sider (sp) on this webpage

http://atari.ksiders.tzo.com/a8emulators.html now combined into one download
called atrutils.zip..
Good Luck

Opps,
I just tried this and it doesn't like basic files. But it does work on
'K-files' short atr's made with makeatr.exe

http://www.atarimax.com/jindroush.atari.org/asoft.html has the BAS2BOOT.EXE
and sources, but I didn't find a program to reverse the process.

Russg,
Try loading program into the Emulator, then break key and LIST "P:"..or SAVE
"H1:filename.bas.   Enter it back into the emulator and SAVE
"D:FILENAME.BAS. Or break key then ALT-'1' to change disk then SAVE
"D:FILENAME.BAS". If you have a hex editor strip the first 258 bytes off
the ATR and save file as FILENAME.BAS.. I have probably missed a step or
two but I have used the hex editor method and it works..
I don't seem to have the file -----starbase hyperion atr------ or I could
email the file to you.

Hi,

I finally put my Atari collection up for auction:
http://cm.ebay.com/cm/ck/1065-29296-2357-0?
uid=34339675&site=0&ver=LCA080805&item=320130416462&lk=URL

It includes a 130XE w/ 320k RAM, (2)130XE, (3)800XL, (5)1050, (1)Indus GT,
(2)ICD MIO, (1)Black Box, (2)R-Time 8 and more.
Check it out if interested and contact me if you have any questions.

Best Regards,

David

:) Reminds me of the "digital data porn" which had an icon of a woman licking an Atari joystick. That was actually as riskay as it got though. It was a site that catered to geeks and therefore had a lot of retro pictures in it. Some good pictures at that. Some computers even with their tops off. :P

Just downloaded Atari Win Plus version 4 - require OS ROMs to get it
going.

Please advise where I can get them - have googled for 1/2 hour, no
joy.

Thanks, regards, Robert.

I believe that the site you downloaded Atari Win Plus version 4 should have
the roms or a separate link. Try this one..
http://www.a800win.atari-area.prv.pl/xf25.zip

Good Luck

Tried several times - just get "Page not found".
Any chance someone could just email them to me please?

Thanks, regards, Robert.

Thanks - I was unaware of that. Is Xformer a good emulator? The one
I got ATM (Atari Win plus) seems good.

Hello all,

I have recently started to rebuild my Atari 8-bit collection an
library after it was stolen almost a decade ago. There is a game that
I used to play and wanted to show my friends son who is into this
stuff as well but I can not remember the title of the game. I
remember it is a space game along the lines Star Raiders but when you
dock with the space station a guy in a space suit would drift out and
repair and refuel the ship and then drift back by waving at you as you
departed.

I thought maybe one of you fellow Atari fans may know of the game I am
seeking and can direct me to a archive that may have it or place I
might be able to buy it.

Post here or shoot me an email at jerry.young@gmail.com

Thanks.

It was a first person type game. Though I do like the looks of that
game and will see if I can find it.

The pluses are things like it has a small footprint, fast, and is
stable. I think the DOS version will just about run full speed on a
286/386SX with VGA graphic card an 20 meg MFM hd.

It has the most trouble with running the tough stuff like Alternate

Reality and sound reproduction. I think the other emulators run more
software and more accurately.

Rick

Yeah it is a hard one to remember but I do remember it. It was kewl
game, as you approached the space station and got within range the guy
would fix your ship.

It's just 3 weeks until the third annual Vintage Computer Festival,
Midwest edition. We've got a few interesting speakers lined up, and
more to be added shortly.

So come all ye collectors, see the speakers, and even exhibit your
favorite items from your collection! We still have plenty of space to
fill up with exhibitors. If you're interested in being an exhibitor,
please sign up before Sunday, July 8th. Don't wait until the last
minute, or there may not be space left!

VCF/Midwest 3.0 will be July 14-15, at Purdue University's Stewart
center. Speakers will run from 11a to 2p each day, and exhibits and
the marketplace will be open from 2p to 6p. Admission is $5 per day
for access to the whole event, and kids 17 and under get in for free.

For more details, and to sign up as an exhibitor or vendor, please see
the official VCF/Midwest 3.0 website at:
http://www.vintage.org/2007/midwest/index.php

If you have any questions, feel free to send me a message at:
vcfmw at computer-refuge.org.

Pat

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce
  Atari related hard/software announcements. (Moderated).
  An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
  http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

  comp.sys.atari.programmer
  Programming on the Atari computer.

I bought Trivia Fever from Professionl for Atari long time ago. Now I
lost the disks. Anyone has copy of it ? Please send me the image ATR.

Thanks!
Tseng

Hey, what is this game? Never seen that title before. Have Trivia Arcade,
Quest and a couple of others, but this one was new to me. Any info on it?

I just thought I'd let you know what I've been reading into the
"Crusader" spam. I don't want to post this to usenet because somebody
might try to tie that in to my posts in some way (someone already has, in
uk.misc).

First of all, I'd like to ask you to believe that my phone line in my
apartment is bugged, and has been for many months. I have moved a couple
of times this year, but "they" have faithfully been on my trail.

Anyway, let's suppose my phone line is bugged. Now, when I talk to my
internet service provider, it's over a SLIP (now PPP) connection. So if
you wanted to bug what was said, either you'd listen in over the line and
have to decode the transmission, or you could go to the service provider
(more difficult) and ask them to decode a particular user's connection.

OK, so now they're listening to everything I do over my SLIP/PPP
connection. A couple of months ago I was messing around with faking
articles through nntp servers and through anonymous remailers. I chose a
nice inconspicuous newsgroup for my little tests, something no-one would
ever notice. Guess which newsgroup I chose??? Yes, _FISH_!!! or
rec.aquaria to be precise

And guess what articles I tried to post? Goldfish, Koi carp and, you'll
never guess... PIRANHA!!! The goldfish article and the Koi went through,
but the piranha didn';t appear.

by now you probably think this is too silly for words. But if you look in
the papers a few eeks ago you will find John Major, Tonny Blair and Paddy
Ashdown sharing a "private joke" about Major's sunburnt goldfish. We
haven't had anything about Koi yet (they must be too dull). Now, sent by
someone who clearly knew what they were doing (they chose an Italian
backbone site for their launch point) we have many thousands of messages
to people all over the globe. All about piranha, and with the punchline
"that gives you something to think about, doesn't it?"

The way it works is that they're trying to kill two birds with one stone
again. I don't knoiw why they should be against these national alliance
people, but my interpretation is that they simultaneously try to
discredit them, and stem the flow of Corley articles.

:People can always be called "MR X", to save them being named.
:
:I'm completely perplexed as to what you mean by b). Revealing identity?
:To who? And why would this be bad for any part of your life when you
:already have a less than respectful reputation here?

I'll just enumerate one or two things that I can still remember. Sometime
around August/Sept 1992 I was living in a house in Oxford, and coming out
of the house was physically attacked by someone - not punched, just grabbed
by the coat, with some verbals thrown in for good measure. That was something
the people at work shouldn't have known about... but soon after a couple of
people were talking right in front of me about, "yeah, I heard he was
attacked".

Again, one I went for a walk in some woods outside Oxford. The next day,
at work, someone said "you know he went to the forest yesterday".

I don't want to put details on usenet of what happened because to do so
would be to risk it happening again. If you put ideas in peoples' heads
then you can find them reflecting back at you, and I don't want that.
Also I can't remember that much from three years ago. From november 1992
I started taking "major tranquilizers" and just blotted the whole thing
from my mind.

>This is a feature time and time again, that the security services
>(presumed) get at you by manipulating other people around you to get at
>you. If you have their contacts, manpower, resources and technology then
>you can do that sort of thing.

:But why? Are you a threat?

They pretend they "have" to get at me. After the first few weeks they had to find a reason to spy and abuse. You can't abuse someone unless they're in the wrong in some way. What I did "wrong" was to be ill. So it became "nutter" and "monster" and "he's going to attack us" coupled with "ha ha ha, he can't do anything to defend himself, it was so funny". That obvious contradiction within their propaganda is something they blithely ignore.

:So, the Security Services never *actually* appear, and you assume that
:they get someone else to do your dirty work. This is a bit of a big
:logical step, here: That person doesn't like me, or is causing me trouble,
:it's not because they've got problems themselves, it must be the "Security
:Services". Yes. Because people are infallible. Or is there more?

A single source is indicated because of the range of harassment. BBC + Capital + manipulated_public_at_large + set_up_situations, what does that add up to? Add in the technology to carry out the covert spying and the manpower and knowhow to follow you around for five years without being spotted. It smells very much of the security services, because there is no other organization (to my knowledge) which does the things I've seen these people do.

Remember, they have deliberately chosen the softest of soft targets to victimize. They purposely chose a mentally ill person who they thought would be likely to kill himself anyway, so that they could get away with murder.

And in all likelihood it will have started as a personal vendetta by someone. Who could that be? I don't know, but I can give you some clues.

The first possibility (deep breath) is that someone from my college set me up. Six years ago I graduated from university in the UK, during the last year there I was steadily getting more and more ill. I know that I was talking in my sleep; although I don't know what I was saying, it got me a reputation, and if someone from my college talked afterwards to the "wrong" people then that could be the reason for all that has followed.

I think that's the strongest contender for source. Directly beneath my room lived another bloke who frequently had his friends round late at night, after the time that I went to sleep. So they could have heard what I was saying in my sleep, and that could have got me the reputation for "talking to myself".

What I don't know is why that should have rebounded a year after I left. You'd think it would have happened sooner; it's a bit odd to wait for a year and then start abuse. That leads me to question what in particular happened around May/June 1990 for them to start then.

>What I don't know is how it looks from the other side, from the side of
>the people who are being manipulated to get at me. On a couple of

>occasions I have challenged people to tell the truth of the matter, but
>they have alwats ducked the challenge.

:Have you ever considered the possibility, that you have made a mistake, and
:the people don't know what you are talking about?

Yes. I am currently considering the possibility that some people around me know only what is being posted on Usenet, and have not been "contacted" by "them". But I _know_ that others have been contacted.

:What words? Are they in common use? Could they be a catchphrase of a
:popular comedian?: "Nice to see you, to see you nice"?

In England the all-time No. 1 is "nutter". Easter this year, returning home from Clapham police station to report five years of harassment ("we're not saying it's happening and we're not saying it isn't happening"), another "not happening" incident of harassment when a cowardly little slut did her country proud by yelling "nutter, nutter, nutter" in the face of the hated enemy.

What can you do about that? You can't yell abuse back in their face, because they know they're supported by their peers, by the media, by the murderers in the security forces. You can't put them down when the fascist establishment is on their side. You can't hit them, because they would deny their abuse, they would deny knowing anything, and bring charges against the "nutter" who attacked them "at random".

>You know, you're
>passing saomeone, they're hardly going to construct an argument for your
>benefit, so they work a word of abuse into the conversation which they
>can giggle at.

:Abuse such as what? We're all adults here, we can take it. Is this abuse
:aimed at you? How can you tell it is?

I think I've said already what the words are. Thing is, at any given time the language is consistent. In January everyone's calling you X, then a few weeks later people stop calling you X and start calling you Y.

You can tell it's aimed at me, because when people repeatedly say the same words are you walk past, then laugh, you would have to be hard of understanding not to recognize it.

>Or they repeat something that's been said somewhere else... the PE thing
>being a case in point. PE says it, then other people pick up the refrain.

:Remind me who PE is again.

PE = "Private Eye"

>: >To give you an example, which I mentioned in another posting. In around
>: >October 1992, Private Eye ran a cover with the heading "Major's support
>: >lowest ever", with John calling to Norma on the cover "come back, Norma".

>
>: Erm. Mike? Heeeellllllooo? What are you on about. What is the other
>: interpretation then? Norma having an affair? Seems a bit wrong, with the
>: heading "Majors support Lowest ever"...
>
>No, this one isn't obvious , it really does need to be explained. I
>certainly didn't understand it when I first saw it. You see, the kernel
>of vitriol is in the words "come back". At the time, the themes of
>abuse were centred around interpretations of those two words (stretch your
>mind a little bit, I don't have to spell it out for you, surely).

:You did in your mail item.
:
:You seem to be scouting about something called a "Double Entendre". The
:inference being "Come" = Ejaculation, "Back" = Anus (not the first part
:of the body I would have went for, I would have foolishly gone for "Back",
:silly old me).
:
:You see to have picked a sodomy double entendre out of a Private Eye
:headline. They are everywhere. The English language has much double
:meaning in it, and if you put your mind to it, you could pull a double
:entendre out of a randomly chosen page of the bible. So what?

>The point is that when Simon pointed it out to Phil, he did recognise
>what it meant after a moment's thought... and so did I... and so did the
>people who repeated it several times later... so however murky it may
>seem to you, that is the meaning they intended it to have...

I still don't really know if the meaning was intended when that headline was
written, or if it was simply "found" after the fact. The reason I think it
might be the former is that I got quite a lot of abuse along the lines of
"sound-alike" or "double-entendre" at work, in particularly from Steve.
So "double" inevitably came to mean split-personality, "two people in one";
"back" inevitably came to mean "backside", "come" inevitably meant you-know-
what, "split" (well, we'd better split now) again you can guess, "bent" (of
a similar bent), the list goes on forever. These aren't "nice" double-
entendres intended for comedy, they're nasty words to humiliate and cause
pain. If I could turn the clock back three years then I would sue my
former employers for harassment and I would almost certainly win. I had to
take pills after a year of Oxford, so they wouldn't be able to lie their
way out of it. Actually, I could still take them to court - the main
obstacle being that three years after the fact is a bit late and much
of what happened, the details that would be necessary for a case to go
to court, has just been obliterated by time.

Hi Snail

This person Corley seems quite interesting for three reasons. I put the
following at the end of a post in another thread just to see if he was
reading any other threads in uk.media.

It seems he is probably not.

Heres an interesting little story from back in the early days of CCD
technology. There was this miniature camera which was designed to fit
behind the infrared receiver lens of the remote control system (just
beside the IR sensor itself) the camera clocked out the data in 256 lines
 of 256 pixels from a Fairchild chip and fed it out, a line at a time,
into the VBI within the TV set itself. The signal could be picked up
remotely from a standard license detector van from where it was stripped
out of the surrounding RF signal and relayed back to the TV station where
it was displayed as a slowscan monochrome image in a corner of the news
readers monitor.

I would go back to single OS for testing. That is, if you have a
socketed 800XL I would just pull one of the XE OS chip from the board
and see if it works when plugged into the 800XL. If the XL isn't
socketted, just stick with the XE initially.

The second bank was probably originally populated by 64kx1 RAMs. You can
either try to find 64k RAMs or 256kx1 chips to start shaking down the
memory expansion.

Seems like there's a lot of wires in there for a 320 XE. Before they
left the Atari market they had come out with a 1 meg memory expansion
daughter board that used the larger chips. Could be that is what was the
original owner was trying to install. If that is the case, you may have
to revert it back to either a stock 130 XE or do a 320k upgrade.

Rick

I am offering three sets of Atari 8-bit computer/game cartridges for
auction

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=190121409159
Galaxian (RX 8024), Moon Patrol (RX 8052), Star Raiders (CXL 4011) and
Missile Command (CXL 4012)

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=190121410461
Donkey Kong (RX 8031), Lode Runner (RX 8082), Mario Brothers (RX 8103)
and Archon (RX 8092)
(Note: This lot is XE Cartridges, they may work in older systems as
well)

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=190121411048
Dig Dug (RX 8026), Joust (RX 8044), Pac Man (CXL 4022), Millipede (RX
8048), Qix (CXL 4027) and Miner 2049er (Big 5 Software)

These worked when I was playing around with them back in the 90's, no
reason that they shouldn't work now, but since I have no Atari to test
these, I'm offering them on an as-is basis.

Thanks for reading.

Hi,

Last word on this saga. I was able to salvage the Omnimon XL board. It is sitting very nice and comfy in my 800XL now.

I guess I'll put the 130xe up for parts listing on ebay. Maybe someone can benefit and I can recoup some expense.

Again thanks everyone who replied.

You can find SIO cables at some atari vendors such as Best Electronics and
Bravo Sierra Computers.

I posted a few months back regarding my Atari equipment I was thinking of
selling. Well, I finally pulled it out of storage and will be listing it for
auction within the next few days. I am posting it here first in case any
enthusiasts would like to make an offer before its auctioned.

In fairness to all, I tested the items for powering up and in some cases
booting, but no guarantees are provided and all items are sold as is.
I am selling the entire lot as one and will not sell items individually.

Here goes:

- Atari 130XE Computer w/ 320k Mod Installed (Powers up and boots)
- Atari 130XE Computer (Powers up and boots)
- Atari 130XE Computer (Powers up but does not boot)
- Atari 800XL Computer (Powers up and boots)
- Atari 800XL Computer (Powers up and boots)
- Atari 800XL Computer (Powers up and boots)
- Atari 1050 Disk Drive (Powers up and boots)
- Atari 1050 Disk Drive (Powers up and boots)
- Atari 1050 Disk Drive (Powers up but does not boot)
- Atari 1050 Disk Drive (Does not power up)
- Indus GT Disk Drive (Powers up and boots)
- CSS Black Box (Powers up, not tested further)
- ICD MIO (Powers up, not tested further)
- ICD MIO (Powers up, not tested further)

(Although it's been a while, I am fairly certain one MIO is a 256k version
and the other is a 1 Meg version. Again, this is not guaranteed and no
promises are made.)

- ICD R-Time 8 Cartridge (Not tested)
- ICD R-Time 8 Cartridge (Not tested)
- Atari 1050 Printer (Powers up, not tested further)
- Panasonic KX-P1091 Printer (Powers up, not tested further)

- Original Floppy Software
  - ICD Sparta DOS

  - Carina II BBS

- Cartridges
  - BASIC, PILOT, ATARIWRITER, FOOTBALL, SUPER BREAKOUT, QIX, MINER 249ER

- Miscellaneous
  - Cables and power supplies, various wired and wireless joysticks (haven't sorted through all yet)
  - RF connecters, monitor connector, manuals and instructions
  - APE WARP+ OS (Not Installed)
  - Original 800XL and 1050 Boxes

As you can see, I have quite a bit of 8 bit equipment. I am still sorting through some of the minor items before I list for auction, but the bulk major items of interest are listed above.

If you're interested in making a quality bid before I set an auction, just shoot me an email. I live in the New Orleans, Louisiana area and interested parties are more than welcome to drop by and take a look.

Thanks,
David

I recently picked up an Atari Assembler Editor cartridge off of eBay. =
It appears to be in like-new condition as the book didn't appear to have =
ever been opened as its spine was pristine and there was no wear at all =
on the cartridge. Well, as much as I'd like to keep something this hard =
to find and in such good shape in its box forever, I just can't resist =
using it because I want to learn to program this beast. :)

So, I got it out and started working with it. One thing is for sure, =
the guy who wrote the original manual lacked a fact checker because the =
errata that was included is nearly as long as the manual! =20

I haven't had any luck saving any sources to WinAPE. These are the =
results I get:

```
EDIT
SAVE #D:SAMPLE.SRC
WHAT?

EDIT
SAVE #D:SAMPLE.SRC<$0700,$0906
WHAT?
```

So, what am I doing wrong here? The manual isn't very helpful and the =
book I have (The Atari Assembler) doesn't even mention loading or saving =
files.

BTW, I'm using a 1200XL with the standard DOS.

You're using the wrong command. SAVE is to write
a section of memory to a .OBJ file, like in the DOS
SAVE command in DOS 2.5.
And the second example is using '$' for a hex address and SAVE only uses
decimal numbers. You'll need a hex<>dec calc I would say to do assembler
much.

You want to save your source file, you LIST it:
LIST #D:MYFILE.ASM
and then ENTER #D:MYFILE.ASM
To assemble your source, you can first see if
it assembles OK without saving the OBJ file with
just a
ASM (be sure to LIST your source first incase of a crash).
And, finally, (almost) you want to make a LOAD and RU
N, OBJ or .COM file:
ASM#D:MYFILE.ASM,#E:,#D:MYFILE.OBJ.
You might want to debug with the BUG command, which you exit from with a
'X'.

Uhm.
SAVE uses hex numbers, but doesn't use the '$'.
eg.

SAVE#D:DINK.OBJ<600,700
would save $600 to $700.
(1536,1792 decimal).
I never use SAVE in ASMED.
Now, you wanna use your .OBJ file in a BASIC program?
You gotta pull # args off stack (one PLA).
If you're passing a parameter, then pull two HI, LO
bytes more off stack PLA PLA.
X=USR(1536,16) for example for a OBJ at
$600 and passing a 16 (eg. TAX for an IOCB1 call)
PLA
PLA
PLA
TAX
I could be blathering here, it has been a long time.

   Hmmm... thought about this for my excess, but then remembered a good lot of
my excess is ST, which he didn't want. Oh well.

Here here!!

So, speaking of which, anyone in Dallas-ish want some Atari stuff? I am thinking of liquidating the collections that were mailed to me in times past by handing off or maybe selling at First Saturday. Actually in reverse order. :) Anyway, some stuff will come available over here soon.

Agh, I've forgotten the main issues - could someone explain?

Iirc the Atari 8 bit computers were unique (in relative terms compared to other contemporary 8 bit computers) in that the random number generator did not use a standard string of numbers.

Is this correct? If so what process did the 400/800/XL/XE use to select random numbers?

Gareth.

There's a 17 bit polynomial (whatever that is) at
53770, which generates a number 0-255, really
fast.
You can PEEK(53770), or LDA $D20A for it.
BASIC gives a 0-.999999 number with:
X=RND(0), which, I would think also uses
the 53770 location, but returns a floating point number.
If your program isn't selecting a random number very fast, you could use the
jiffy clock at 20.

What do you mean by "standard string of numbers"?. What is correct is
that on the Atari, there is no need to use the classical CPU driven
pseudo-random generators (even though some games did, e.g. "Boulder
Dash" did) since there is a pseudo-random generator in hardware.

> Is this correct? If so what process did the 400/800/XL/XE use to select
> random numbers?

It had a hardware register that allowed access to the output of the
Pokey polycounters. The very same polycounter is also used to generate
the "noise" output of pokey, and since the register is reshuffled at
hardware clock speed, and the sampling times are more or less random, an
additional factor of randomness enters the game.

So long,
     Thomas

Hi,

      I'm getting back into the 8bit Atari scene. Was hoping to get
in touch with local Atari group or users. Maybe swap hardware, get
help with programs etc. Let me know via email if you are within the
state at all.

Thanks,

Thanks for the replies.

The "standard string of numbers" refers to, well, the standard string of
unchanging numbers that a number of computers including the Vic 20 and C64
used to generate random numbers.

Gareth.

Most games on the C64 use the whitenoise generator on the SID to get =
random numbers.

Yes - but greatly improved.

Some Crazy Ideas - For instance...
Incrporating the W65C816S or W65T32 processors

Runs 8-bit Software

Incrporating the expended address range

     Or more? .... (Bank selecting)

Incrporating the improved speed

Game Controller Ports

            2 ports Minimum

            4 ports?

 more?

Improved OS

            To handle all improvements

Boot loadable

            Boot loader boots OS From a Drive

dual pokey

stereo sound

Standard IBM keyboard connection

IDE interface

hard drive usability

cd-rom useability

flash card usability

Floppy drives

True Double density

3.5" compatible

Improved video

Modern Monitor compatible

Switchable 40/80 column modes

Various graphics modes

Other improvements

Parallel port

Serial port

USB interface

Expansion slots

Network accessible

Motherboard to fit standard pc case

To name a few suggestions.

Just a question, how to you plan to keep this compatible to the POKEY
keyboard matrix? Just by adapting the Os, a lot of games will not
work with this modification.

Ditto. A couple of games use direct communications with the floppy
and bypass SIO. (Lucasfilms, for example, does this).

> Improved video
>

Are you going to re-design the chips?

> Motherboard to fit standard pc case
>
> To name a few suggestions.

I wonder what the purpose of this design will be. Having fun designing
it is a good reason for sure, but a standard PC might be easier to get
and cheaper to build. Plus, it can also run Atari games if you want to,
but also a lot more. (And, adding more graphic modes would be a lot
easier and cheaper. Just, it lacks the software to make use of it. ;-)

So long,
     Thomas

I'm looking for an ad that appeared in Analog for their Analog
Compendium book. It was a single page with several screenshots of
various programs. The book came out in 1983, and all the issues I
have are 1986 and later, so it probably only appeared in the early 80s
issues. If someone has a copy of it, could you make a good scan of it
for me? Thanks.

Scott

Is it possible to greatly improve on the Atari 8-bit? I thought it was the
best computer ever???

I was seeing IBM keyboard adaptor circuits in a couple of 8-bit sites. I was
thinking that it could be incorporated into the design some how.

Through an emulator - but building it yourself would be more fun.

I have 128K, that's good enough ;-)

Seriously though. It would be nice with a little higher resolution with at least 16 colors on screen (320*192 with 16 colors is fine, meaning you can have 16 different colors on each scanline)

Then it would be perfect for making a Shining Force for it.

Would anyone happen to have the CIS SIG*ATARI or Delphi software
archives hidden away somewhere? I've found partial archives.. but
never the whole thing. I'd like to get them posted to atari8.com if
someone helped me locate them..

Thanks!

If you have developed hardware for the 8-Bit series (interfaces,
Cartridges etc.) you are invited to enter the contest for the best
hardware in 2007.

You can WIN Money and appreciation.

               ATARI-Users need you!

Deadline is on August 31st 2007.

You can find more details and the rules at the abbuc pages:
http://www.abbuc.de/modules.php?name=DocTree&dtIsBlk=y&dtId=252

Any questions? - Please feel free to ask!

Greetings,

Andy

Team Hardware - www.abbuc.de

This was advertised in Analog magazine's ad for their Compendium book,
but it didn't appear in the book. I'm not sure it even appeared in
any issues. Anyone know more about this?

Here's a copy of the ad, which features a screenshot of it:

Hi,

I managed to get an ATARI XEGS, but without Keyboard.

Does anyone here a XEGS Keyboard to sell or swap?
Or can a Keyboard from a 65XE or 130XE adapted to a XEGS?

I dont know if a 65XE or 130XE has the small pcb between the
keyboard-matrix and the mainboard.

I also need a clue where to find the Pinout for the
XEGS-Keyboard-Port...

Many thanks for informations in advance.

Bye
Guido.

This project has the foundations of an 800XL, in that it has a 65C02 running
at Atari clock speeds and drives sound and baseband RGB video to a TV.

http://www.howell1964.freeserve.co.uk/logic/polymorph_project.htm

It also has code for the AY38910 and POKEY chips, so you can have as many of
those as your FPGA can support.

The CPU is rated to 14 MHz, might eventually even run at 14.318 MHz, eight
times the original Atari speed.

I plan to have the FPGA being loaded from a Micro-SD card, which will also be used by the CPU for disk storage. I think you could store most of the games ever written for it in a gigabyte card.

> Improved OS - To handle all improvements

Software - yuk! I hope to port disk storage software but that's it.

> Boot loader boots OS From a Drive

Yep, that's do-able.

> stereo sound

Already got it. 8-bit sound for now, but it could drive a modern CD DAC for >= 16-bit sound.

Why not go for 5.1 -channel sound for home-cinema effects?

> Standard IBM keyboard connection

And that. There is logic to translate PS/2 codes to Atari codes.

> IDE interface

Sure, hardware wouldn't be too hard.

> Floppy drives

Hmm, no. Too much effort and circuitry for a medium that is obsolescent. My laptop doesn't have one as standard.

> Improved video

Can do.

> Modern Monitor compatible

Tricky, the timings are very different.

> Switchable 40/80 column modes

Unless you have a very big TV, 80-columns is hard to read.

> Parallel port
> Serial port

Can do.

> USB interface

Done (as a slave so you can use HyperTerminal to cut and paste text to and from the machine).

> Expansion slots

All expansion is done inside the FPGA.

> Motherboard to fit standard pc case

Way too big. I was thinking of a 100 by 220 or 160 mm PCB.

It is 220 mm long now, it should be able to shrink to 160 mm long.

Wow, thanks! Finally, after all these years... it actually exists :)
So I guess it did appear in one of the issues along the way.

Ive seen the A and B libraries - but it seems there was a section with
a TON of comms progs - I'm searching for BBS software - pretty much
any I can get my hands on. I know there were versions of AMIS and
hacks out there - NeptuneBBS, Carnival, etc.. I'm just having a hard
time locating them ;)

And thanks for the pointer to Holmes there-- thats just awesome.

I need a spare SIO cable for SIO2PC. Is it possible to buy these
anywhere or anyone have a spare they'd be willing to sell?

I'm hoping to use SIO2PC to finally get my first programs off the
disks where they've been mouldering for 20 years and properly archived.

The best I can do is stop by the FedEx/Kinko's in Hawthorne, (310)
297-6850. You can give them your credit card info and pay for the
packing and shipping yourself, plus the $20 for me. If I am to do the
work my rate is $120/hour, $500 payable in advance & I'll refund any
excess over my labor and costs. Personally I don't think it is worth
shipping as we're talking well over 50 pounds.

Or you can try finding a friend/neighbor with relatives/friends here
in the SouthBay for me to take it to and have them do the work.

 Panther could
-display 8,192 colors on-screen from a palette of 262,144 colors.
-handle 65,535 sprites of any size simultaneously.

Martin Brennan (one of the engineers who formerly worked for Sinclair research, started Flare technology who made the Flare One chipset, merged the Flare One chips into the Slipstream ASIC with improvements for the Konix Multisystem). had this to say about Panther:

"It was a novel video architecture that allowed you to create windows of different sizes and different bit depths. Essentially you didn't have a frame store - it was a composite of frame stores - a kind of smart video frame store. It would have allowed a great deal of sprite style animation. Sprites in general in those days would have been of a fixed size e.g. 16x16. The games looked 'spritey' because of that, this would have been quite an interesting departure."

http://www.konixmultisystem.co.uk/testing/index.php?id=interviews&content=martin#start

if Panther was as powerful in 2D as claimed, it would've been incredible in 1991-1992, with more sprite pushing power than SNK's 16-bit NEO-GEO
(4096 colors from a palette of 65,536 - 360 sprites)

I wish Atari had released Panther with in 1991 with ports of sprite-based arcade games that were impossible or difficult to pull off on NEC PC-Engine, SEGA Genesis, SNES, SegaCD, etc.

Mike,

I wish I would have seen this earlier. I was in San Diego for the weekend
and could have easily have driven up. If I were to plan another run down
that way, would you hold off dumping?? Let me know.

Adam

Well, if the Panther could "not suck" then it could definitely do at least
one thing the Jag couldn't.

(for those who can't read between the lines, the Jag {for the most part}
sucked)

As I understand it, the Jaguar was essentially a Panther with a larger
color palette and rudimentary 3D, as well as the larger bus. It has
often been commented that the Jaguar (as wel las the Saturn) had very
powerful 2D hardware. Problem is, developers were very quickly moving
away from 2D games at the time.

As for whether or not the Jaguar sucked - I still think it was pretty
great, but it was clearly held back by a lack of quality software
(something Atari only made worse) and some significant design flaws
(bugs in the custom chips, buffers too small, etc).

 the two things that set the jaguar back was that it was a powerful
machine that very few understood how to program for it.
 that is why there are those "16 bit" looking games on the platform.
the other was the tremeils.
 i have a panther, i bought it out of the atari offices. but alas, no
software.
thanks,

Hi Mike. I work in Redondo Beach. Can I come save this stash from
the dumpster? (Or, if you really want the $20 I can let you deliver
it... :D) Email me at bentoo at gmail dot com.

Hi NG

Shipping (yes, shipping) to any Country. Shipping-Insurance will be
made and paid by me!

Shipping Costs plus a "1000 USA Dollar" or "1000 EURO" and it's yours.

ATARI (Original) Speech Synthesizer!!!!

Best Regards,

Daniel Mandic

Anything with an Atari sounds like fun to me. Different strokes for
different folks, I guess... :)

Speaking of Summer Games, that was a fun game! My siblings and I spent
countless hours playing that. Ah, the memories... :)

I could seriously spend at least a couple of days doing nothing but
playing Atari games with my kids. Maybe I will - I just need to dig
out and hook up enough systems that all 4 of them (and me, of course!)
can play at the same time so that there is no fighting. Maybe my wife
would even join us. :)

- Trevor

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:

```
      net.micro.atari8 - created Feb 1986
      net.micro.atari  - created Nov 1982
      net.micro        - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management
Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce
  Atari related hard/software announcements. (Moderated).
  An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
  http://www.atariarchives.org/csaa/  Moderator: Kevin Savetz

  comp.sys.atari.programmer
  Programming on the Atari computer.

For immediate release:

MARCH, VintageTech, and the InfoAge Science Center announce the
Vintage Computer Festival East 4.0

What: A celebration of computers, technology, and culture from the
1940s - 1980s. Open to the public
When: June 9-10. Lectures from 10am-2pm, exhibits from 2pm-6pm both
days
Where: InfoAge Science Center, 2201 Marconi Rd., Wall Township, N.J.,
07719
Cost: $10 for one day, $15 for two days, free for 12 and younger, free
parking
Contact: Evan Koblentz, evank@midatlanticretro.org, 646-546-9999
------------ --------- --------- --------- --------- ---------
--------- --------- --------- --------- --------- --------- --------

Do 8 bits excite you more than 64? Prefer blinkenlights over SVGA? Yearn for the days of input via toggle switches and paper tape? Or just want to play some Pac-Man? Then check out the Vintage Computer Festival East 4.0, June 9-10, at the InfoAge Science Center in Wall, New Jersey. This year's event is again hosted by MARCH -- the Mid-Atlantic Retro Computing Hobbyists.

The Vintage Computer Festival began in 1997 in Silicon Valley, migrated eastward in 2001, and became a MARCH event in 2006. So what is a VCF? Imagine an antique car show where every owner let you test-drive his car, and where Henry Ford gave a lecture and signed autographs! It sounds unreal, but that's what happens with vintage computer technology at every edition of the VCF.

This year's edition of the VCF East will feature 20 exhibits of computer technology from the 1940s to 1980s. Visitors will have the opportunity to use an IBM punch-card machine, witness a legendary Digital Equipment Corp. PDP-8 minicomputer in action, and experience all the top brands of 1970s microcomputers from companies like Apple, Commodore, and many others. Older S-100 kit computers, single-board computers, portables, and even analog and prehistoric computer technology will be demonstrated. On the extremes, we have one exhibitor preparing to show an authentic NASA Apollo flight computer, and another who'll display the most classic videogame console ever -- Atari -- play it 'til you drop! Read the full exhibitor list at http://www.vintage.org/2007/east/exhibit.php.

If that's not enough, then listen to some of our guest speakers. The highlight this year will be a 30th anniversary panel in honor of Commodore, which was headquartered nearby in West Chester, Pennsylvania. The panel's star is Chuck Peddle, inventor of the famous MOS Technology 6502 chip, used in a wide variety of classic single-board computers and in microcomputers such as the Commodore PET and the Apple II. Peddle will join us via live videoconference, in which he promises to share previously untold stories, after which he'll answer audience questions. Commodore engineers appearing live at our show will include Bil Herd, Bob Russell, and Dave Haynie. We'll even have a birthday cake featuring the famous Commodore "Chickenhead" logo. Other speakers this year include Herb "Dr. S-100" Johnson, who'll explain the history of the CP/M operating system; Bill Degnan and Sellam Ismail; who together will give a crash-course in vintage computer discovery and restoration; and others to be announced. In addition, Ismail will give a second talk, but the topic is secret! You'll have to be there to find out what he plans.

Yet another highlight of the VCF East 4.0 will be our new VCF Theatre, organized by acclaimed technology filmmaker Jason Scott. His films include "BBS: The Documentary" and the upcoming "Get Lamp" about text-adventure games. At the VCF Theatre, he'll be screening vintage computer-themed movies all weekend long in the afternoons.

New this year is the donate-to-sell booth. Here, everyone is welcome to donate vintage computing items, with all proceeds to help MARCH

build its computer museum. Our museum directly benefits future generations, so do your part and give something to this wonderful non-profit cause! (We request that any unsold items be re-claimed before you leave the VCF.)

Did we mention the prizes? We'll have t-shirts, vintage computer replica kits, books, and maybe a surprise or two. All you have to do to win is show up, and be there when we announce winners each day.

Finally, should your historic technology interest extend beyond just computers, then you've come to the right place. Our venue at the InfoAge Science Center is historic in itself. The facility began life in 1912 as an R&D center for Britain's Marconi Wireless Telegraph Co., and then spent several decades as Camp Evans, a top-secret laboratory of the U.S. military. RADAR that first spotted airplanes over Pearl Harbor and mankind's first radio signal to the moon were invented here, along with numerous other achievements. Today, the center is on the National Register of Historic Places and is a Black History Site. It's also home to the National Broadcasters Hall of Fame and an assortment of non-profit clubs all related to the history of technology, with a local focus.

Driving directions, lodging information, exhibit details and more are posted at www.vintage.org/2007/east/.

For more information about MARCH, visit www.midatlanticretro.org
For more information about the InfoAge Science Center, visit www.infoage.org
For more information about VintageTech, visit www.vintagetech.com
General questions? Want to exhibit or have a vendor booth at the VCF East? Member of the media? Contact VCF East producer and MARCH president Evan Koblentz, evank@midatlanticretro.org, 646-546-9999.

Hi,

     Was hoping someone could point me in the right direction. I have
a 130XE with an Omnimon XL installed. Some of the wires have come
loose. I was wondering if there is a install manual/schematic or if
some kind soul has a set of good quaility photos of thier 130xe
installation. It would sure help me salvage this computer.

Thanks,

From 7373448561512456158

When you say Omnimon, do you mean the Ramrod 3-OS board, or just the
Omnimon OS chip?

The Omnimon was just a ROM chip that replaced the XL OS ROM.

The Ramroad board pluged into the OS socket and then had a wire going to a 3
position toggle switch to allow you to select which of the 3 OS's to use.

There are no other wires than that one

I have on of these in my 130XE (and the original docs) and can take a photo
for you.

-Jason

Hi,

    Thanks for your quick response. I'm not sure what I have is
either. I have put up on a scractch website these photos. I was told
this was the Omnimon XL upgrade. But it definitely has more than
three wires connected on the board. Could it include the Ramrod XL
upgrade too? Let me know what you think it is.

Ok, you definately have a Ramrod board in your 130XE.

It is fully populated with 3 operating systems:
    Omnimon
    Omniview (80 column OS)
    Standard XL/XE OS

The grey cable with the 3 position toggle switch is the only one that is
part of the Ramrod board. The switch connected to it allows you to select
which of the 3 OSs you want to use.

I have no idea what the other red wires and the other switch do. Probably
someone else in this group would know. One strange item is that it appears
that one of the 64K RAM banks has been removed. I see what look like
sockets installed there but no RAM chips in them.

-Jason

I have an ATARI 800XL, several 400's with at least one modded with
more memory, disc drive, printer, interface module, tape drive, tons
of cartridges and disks, remote control joysticks and other
controllers, and dedicated color monitor. Factory operating system
docs, manuals, Antic mag's, etc....don't even know how much, but
several large boxes.
Need to find good home with Atari fan, no reasonable offer refused,
but gotta take it all. Got something to trade? Would be free but
don't
want someone to grab it on speculation for a garage sale. This is
classic early personal computer history, deserves to live on.
Will be taking to the Midwest Gaming Classic this Saturday, but no
booth or table, so contact me by email.
I am in Crystal Lake IL if you are nearby. Will not ship unless you
pre-pay cost - lots of stuff and heavy.

Regards,

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Hi Jason,

   This was a ebay purchase a couple days ago. I should be getting my
hands on it Thursday.

   Seems like some wires go through a ground hole to the other side.
I've got some time this weekend to investigate further. Still might
need a pic of your setup. I'll let you know what I find out.

I concur with Jason on the added triple OS mod but can also add that someone is in the middle of a extended ram upgrade on this machine as well. I can see pins 11, 15 and 16 lifted on your PIA which are PortB's bit 1, bit 5 and bit 6 respectively so that's an extended memory mod to be sure. Plus you are missing the ramdisk memory chips probably to be replaced by 256k chips or ??? I don't know right off which memory upgrade this might be or if it's wired right to begin with. Sadly, my guess is it's a botched job considering it never got finished.

I can see one stacked glue logic chip to be a 74LS32 but what is the other one? And where are the loose wires? Perhaps just from a description of the connected end, someone could figure out where it's supposed to go.

Hi,

     I see the second bank of memory missing now. Jeeze, not sure why I didn't see it before.   Quick question. Is the second bank socketed normally so that the motherboard can be used as either a 65XE or fully populated as a 130XE?

     According to Lee this could be a botched memory upgrade. Now the extra wires are starting to make sense. Still doesn't explain why

the extra switch though..

Later,

That switch may control Basic if the memory mod is large enough to
need all of PortB for memory bank management... just a thought.

Yeah.
And Summer Games is available on cartridge also. Alas, while the disk
version of SG is for 8 players (with an option to save world-records on
disk), the cart version is only for 3 players (no saves possible)... but
therefore the cart "loads" much faster, no more disk-flips, etc. ! Check
Video 61, B & C Computervisions and other vendors for the cart
version... greetings, Andreas Koch (aka Andreas Magenheimer, now married!)

And Jess could be right as well concerning the purpose of the second switch. OTOH, some updates have this incredible approach of adding in an "off" switch so the user can run it without the upgrade. Such a switch should give the user back his original setup which I find to be mission impossible in general so I have to wonder about the intelligence of including a switch to begin with but some still do. Only way to know what that switch really does is to know where the wires go and only you can do that once you get your hands on it.

Answer to second question is no. There normally are NO sockets on the 65XE or 130XE - NONE!! Since you've even got a 40 pin one (PIA), there has been a lot of unsoldering and resoldering done to it. The motherboard of the 130XE is one of the most un-forgiving boards that could ever exist as far as soldering accidents go. Lifted traces, cooked substrate now becoming a conductor and thus ruining the board permanent like are always a possible outcome with every touch of the soldering iron. Just more reasons to strongly assume it's a botched job, but don't give up on it yet. IIRC, the 65XE just has the missing ram chips with the solder holes filled with solder, but I don't actually have one to verify that with so I could be all wet once again.

Congratulations Andreas!

Oh, BTW! I have MINT copies of SUMMER GAMES, for those wanting the DISK
version.

Hello everyone,

    Thanks for the posts. I got the 130XE today. Opened it up and confirmed my worst fears. This is definitely a badly botched memory upgrade. Missing the second bank of memory as well. The only thing that might be salvagable is the Omnimon board. Even the XE OS chip had bent pins where someone had jammed the chip into the socket.

    Is there anything special I need to do to test it on an 800XL? I believe I have one with a socketed OS chip.

Thanks again everyone,

Later

The Ramrod board just plugs into the existing OS ROM socket (or is soldered into it's position). If it is socketed, then all you need to do is pull it out and plug it into the ROM socket on the 800XL.

It would be rare for it to be socketed on the 130XE though, since there wasn't enough clearance to have it fit under the keyboard if a socket was in place. On mine, even soldering it directly to the motherboard, I had to cut a hole in the RF shield to make it fit. If this is the case, you can pull the individual OS ROMS and swap one of those with the OS ROM in the 800XL, but you lose the ability to change the OS via the toggle switch.

-Jason

That's reminding me to a friend, who has been hitten his 800XL hard. One Mainboard was already on the Wall....

I heard about 2.0 being fine.

Jay Miner fitted a fast GfX into, with nice interrupt effects. Fruit Machine Games were breathtaking smooth...

Turbo Basic (Happy Computer) and Turbo1050 (PAR connected) etc. :-)
But I never used Turbo1050, not that I would not know to do so, but the 1050 is standard well enough.

Kind regards,

Daniel Mandic

wrote:

> Colors? Where's the shades on the C64? Hmmm. Vastly superior, okay.

Yes, less colors on C64 but the benefit of that is that the
C64 can use the colors much more efficiently. On A8, you're
bound to 4 colors on 160x200 resolution.

Did you ever see the 256 colors pictures on the Atari? They look better than
any I've seen on C64. Granted, the resolution is even lower there, but still
they look damn fantastic for an old computer.

And again, for speed, try out Rescue on Fractalus and Ballblazer on both
consoles, Atari beats it hands down.

BTW : I do have C64's too, so I am not Atari all the way, but I love Atari
more than any other computers. Guess the Star Raiders thingy got me and kept
me

Did someone back in the day make a printer driver for the HP Laser Jet 5L? I
recently inherited one which is definitely not Epson compatible for use on
the Atari 8 bit, plus the manual gives only a very limited list of escape
codes.

thnx,
Jess

I'm moving away from the SF Bay Area, and have a few misc. Atari items
to get rid of, to whomever wants to come pick them up in the next week
(by May 19th!)

* Mapping the Atari (original, 800 version)
* SX212 1200bps modem (without case)
* Dead? Atari 1200XL motherboard
* Mini trakball
* CX85 numeric keypad
* Various other manuals

Contact me by email if you can come pick up in Mountain View or
Menlo Park, California.

Then you should seriously watch more C64 graphics, there is tons
of awesome 160x200 or 320x200 pictures out where I have never seen
anything on A8 which comes even close to it.

> Granted, the resolution is even lower there, but still they look damn
> fantastic for an old computer.

It looks nice, but is also flawed (low resolution and only every
2nd rasterline contains graphics)

> And again, for speed, try out Rescue on Fractalus and Ballblazer on both
> consoles, Atari beats it hands down.

I never argued this. (Although I think that Ballblazer C64 could've been
atleast equal to the A8 version, but that's another matter...)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

I am considering making a new mebrane keyboard for a different
computer (TS1000) and wonder how did Atari handle the space bar on
the
400? Is there multiple contacts or is there a long contact?

On a standard size key you can have a single contact in the center
and
it would work, but how about the space bar? Is there a "sweet spot"
on
the space bar where it works and on another where it doesnt?

Bill H

First, apologies for being late this month, many, many
many things going on. An Atari SysOp is never bored. :)

Second, we've reached another milestone (of sorts) here,
at The DarkForce! BBS. We just recently added our 500th
user!

Because of that, I had to expand our user database. Some
functions, such as MassMail will have some unintended
consequences because of this. Current users will have
multiple old MassMail entries waiting for them. Simply
hit any key to go through them all. Everything should be
returned to normal on your next call. Thanks for your
patience and understanding in this matter.

So...here is to another 15 years and 500 more users! :)

Our monthly winner of the 3 magazine subscription to
ST Magazine is:

 Orion_

Congratulations, and remember, you can't win if you don't
call each month! :D

I thought I knew of all game titles made by the big
game companies for the Atari, but apparently I was
wrong.

I had never heard of "Morloc's Tower" and "Plattermania"
before.

Anders

Okay guys... as some of you may already know... Telnet is down. It
should be back up in a couple of days. But in the meantime... the java
applet is still available at www.newnet.net... although, some people
seem to be having problems with it. The best bet is use an IRC client.
I did discover a problem. Most of the servers won't let you in unless
you use port number 6667. So... if you are having problems connecting
to a NewNet server here is my suggestion. Type /server servername:6667
(ie: /server irc.eyearesee.org:6667)

Here is a list of the servers on New Net

irc.tobug.net
irc.Sith-Net.com
irc.rejectauthority.com
irc.redwolfs.net
irc.ircsoulz.org
irc.frog-face.com
irc.eyearesee.org
irc.spasticsystems.co.uk
irc.flatlined.net
irc.indianskickass.info

Hi,

I miss the day of a monthly meeting to talk computers. I was

wondering if anyone in the Charleston,SC,USA area would like to start
another one?   I don't know many people any more that use the C64, or
anyother 8 bit, but I might get lucky.

Thanks

Hi guys. Just wanted to do a little self-promo -- I've started making
flash drives stealthed inside Atari cartridges! Figured this was the
best newsgroup to announce it. The first one was handmade (next time
I'll use a Dremel; X-acto knife cutting isn't too easy!), and includes
the original label (with the usual wear and tear).

The very first auction: http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&item=260119451113

Once I get a little more money I plan to use reproduction laser-
printed labels, and offer 1, 2, and 4GB drives. Let me know what you
think!

I know IBM drive can not read Atari Single Density Disk due to FM
incompatible. Double Density and Enhanced Density drives uses the MFM
recording method. IBM can read the Atari Double Density disk.. Can IBM read
the Enhanced Density disk???

Thanks!
Jack

Actually some can read single density. The first true IBMs had disk
conrollers that would switch to FM, it was later stuff that was spotty.
I've even had late model VIA or IDT all in one chips do it.

IMO you would probably be better off trying single density format to
recover/transfer anything since the density and a half 26 sector per
track format was a tough read even for MFM controllers.

Easy way to test your system is with 2 programs and maybe an emulator.
Get ANADISK which is a generic CPM/??? reader and DEANA which inverts
the bits you get out of ANADISK to Atari format. I think the disks can
just be given the .XFD extention and read into any emulator that
supports that format.

Rick

Here is what we need to do... you see, we as Atarians need to set up a virtual meeting room.

Make it where we can all log in, and walk around this meeting room (I picture kinda a Quake III or better engine) and everyone like in Quake can walk around from table to table. Once they get to a table, they can view the live stream of a computer setup that a user has under a camera. That way it looks like a computer on a table in a meeting room and that user can demo something and people can still look over his shoulder.

You can set it up so that all the demos kinda stream the sound all at once so that you get the noisy effect of a meeting, or where you can only hear what is a certain radius from what is around your character.

You can walk up to people and talk (audio chat) from person to person. Ect.

If I had my drethers, I would go to the Dallas Infomart and map that place out and use the Infomart as a base for a meeting area for all user groups.

This way many retro fans from all around the world can finally be at one place.

You can even mark off a "Photon" area where weapons can be pulled out and you battle each other. :D (If it is already a modified gaming engine, not to far a stretch. Everywhere would be a safe zone except the "photon" area.) (Photon was early laser tag here in Dallas).

Now... say someone wants to try a demo. What could happen is, the characters could exchange seats, and the camera could switch from one users' computer to another user's computer, but just display the same game. In the meeting room, one person would get up from in front of the computer and the other would sit down and play. :)

Basically the IRC chat to meet is already an ongoing meeting room, now to add some graphical settings and streaming video and I think we'd be set!

At least till transporters can be invented.

Cool! :) It's amazing what you can use 2600 carts for.

Me, I would probably put a USB drive in a 400/800 cart, just because I'm an
atari 800 nut!

As Rick already wrote, some can and some can't. There are even some
controllers that can write Enhanced Density but aren't able to read
back what they just wrote.

Have a look at WriteAtr, the latest version supports reading/writing
enhanced density and there's also a lot of background in the readme:

http://www.horus.com/~hias/atari/

Unfortunately most PC disk controllers have problems reading disks
formatted on the Atari 1050, mainly because the the 1050 didn't
care about the index hole and the PC disk controller just aborts
reading a sector if it encounters an index pulse. So you'll have
a single bad sector in each track...

You could try disabling the index pulse on the PC, for example by
covering the index hole on the disk. I haven't tried this yet,
some drives/controllers could go nuts, with some it might work.

so long,

Hias

Morloc's Tower is along the lines - possibly part of - the Temple of Apshai
series.

John.

For you? Track and Field without a doubt.

> Are there good digitized dicks on the ATARI?

Jack Tramiel was, iirc, produced in glorious grey scale as a showcase for
the 800XL's graphic performance.

> What about digitized boobs?

Yes, other members of the ruling clan also appeared.

> Did you ever get a hard-on while playing an ATARI 800 game?

Wow, that's the first time I've ever seen anyone use a hypen when typing the
phrase hard on.

Gareth.

I do not know if any specific drivers for the LJ5 etc were made. I have a
driver for Paperclip for my HP DJ500P. The problem is that with PCL, a single
command can be 4 to 10 characters long. Sometimes, they can be stored in a
macro that can be called using fewer.

Barring a mod of the software, the only option is to embed the commands in a
document(which I still had to do with paperclip sometimes), or create print
files to send to the printer as needed.

Hi,

I was wondering if there was a list of only rare 8 bit games that were
actually released?

You know about Andrew Krieg's cart list?
It isn't 'only' rare/extremely rare, it also has
C ommon U ncommon.

Look for the "9" and "10" games on http://www.atarimania.com

Includes not only cartridges but tapes and disks as well.

Hi Russ,

Advanced Search: Click on 8-Bit (left), then click on Advanced Search at
the top.

There are common titles listed as rare, but they're actually rare versions
of common titles.

I have no idea how the 1-10 rarity ratings are derived. But maybe that's
described somewhere on the web site as well.

There are 3 carts with rarity rating of 1: Centipede, Pac-Man, and Star
Raiders. That actually seems about right. :)

Oh, and I see it matters which software category you're in on the left.
Within Utilities, the only cart with a rarity rating of 1 is BASIC. Also
as expected!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

> played Behind Jaggi Lines (to be re-named Rescue on Fractalus)

Yeh those look so basic now, but they were mind blowing then.

I remember Rescue on Fractalus and how you could fly into the atmosphere, the landscape detail, landing... having that creature pound on the wind shield always scared the hell out of me. Just a great great game.

Star Raiders for gameplay still does the trick. :)

Let's see.... I has a pile of junk, a pair of Atari 800's, and 800 XL, a 1200 XL, and a 130 XE. (the 800 XL I could manage to get working to the TV set.) A 'new' keyboard for the 800 XL, A tape drive, a 820 disk drive, a 1050 disk drive, five RANA drives in various stages of decomposition, altho' one of them actually managed to boot a DOS disk! Not bad for 20+ year old disks and drives. A pair of 850 interfaces, an ICD MIO (Multi I/O) interface with 256K RAM, serial, parallel, and SCSI/SASI interface (I had used this to run my BBS on an 80 Meg HD) a Volksmodem (with cables!) a pair of Atari 830 accoustic modems (one boxed), an Atari 1030 modem, a boxed pair of Atari Wireless remote joysticks, a Koala Pad with a Koalapainter cartridge, and a pitiful assortment of cartridges, including a pair of BASIC-XL carts. Everything looks like it has been moldering in the garage for a couple of decades -- which it was.

$20 for delivery within 10 miles of Gardena, CA -- which could be a business establishment you have called to arrange packing and shipping from. Offer expires at 4pm on June 1st when it goes to the dump.

>
>Name this file DIRX3 save to D8: load Turbobasic and ENTER "D8:DIRX3

Perl Golfed:

DPO.82,9985:CLR:DIM N$(8),F$(19):N$="D8:DIRX3":CLS:? "DRV(1-8)":GET
D:F$="D :*.*":F$(2,2)=CHR$(D):CL.#1
OP.#1,6,0,F$:DO:IN. #1;F$:IF F$(1,1)<>" ":EXIT:ENDIF:?
F$(2,14);:LOOP:DPO.82,9986:GET D:E.N$

I also wonder why all the messing with the margins when you can just
use a REPEAT/UNTIL loop that'll also show the sector count?

Folks, this is messy. Why, just why? Turbobasic has a command
named "DIR" that does just that!

So long,
     Thomas

Back in the day, Atari software in the UK was much more expensive than the
US, it would not surprise me if the misleading information was simply down
to Atari UK wanting to make more money.
Have a look at the Commodore book 'On the Edge' and see what they could get
for a PET in the UK/Germany vs. the US, then remember these guys then took
over Atari in 85!

Hello Atari people. I recently got an email from a guy who wondered
why I still have revision 4.19 of SIO2PC available on my site when I
had issued revision 4.21 years ago (April, 2000 to be exact). I guess
I just didn't realize I'd gotten behind. I dug through several
computers and found the revision 4.21 source and executible and have
now put them up.

It doesn't look like there were any big changes and no added features

from 4.19 to 4.21 -- just minor tweaks. So if you use SIO2PC and it's
working OK, you probably don't need to bother getting 4.21. I
uploaded the "new" versions of both my distribution package and my
source code.

Also, I've moved my web page a couple times in the past several
years. The current location is

http://pages.suddenlink.net/wa5bdu/sio2pc.htm

Regards,

Nick
the SIO2PC guy

It's time for Commodore and Sinclair users to finally
unite and bash the ATARI 800 computer, a real
piece of computer garbage.

The C64, the VC20, the Plus 4 are vastly superior to
the mediocre ATARI system and its mediocre games
that look worse than the average C64 type-in listing.

Even the Spectrum is far more powerful than the ATARI
and the Spectrum users finally need a system to bash
and the ATARI 800 is perfect to be bashed!

So, please, discuss the crapiness of the ATARI here:

The crapness of the Atari 800 is off topic for CSS, whereas the
crapness of the commode is entirely on-topic. If you're trying to
create a cross-group flame war, not enough people bought Atari 800s
for a flame war to really take off.

I have a Atari 800 XE and I kinda like it. They keyboard is a bit
crappy, but most computers in those days had crappy keyboards.

A number of years ago they were on offer in a toystore chain. An Atari
800 with 10 games included and I bought one.

Then eBay arrived and I started looking for Atari 800 games. Funny
enough only those 10 games kept getting listed. So I guess a lot of
people bought this Atari 800 + 10 games set.

I think I actually have one in the loft somewhere, I've got at least
two Atari 8-bitters and a few STs, I never owned the 8-bitters when I
were a lad (I had a speccy) but I owned an ST -- for 6 months before
realising it was shit compared to the Amiga and dumped it for half the
price I bought it for! The amiga lasted 1 year before being dumped
for an Acorn Archimedes, which was the best home computer *ever*, and
one I used for 7 years before Linux came along.

Every computer company I've ever dumped has hit the buffers soon after
I've jumped ship, see how the world follows my every whim ;-)

I had the same experience with my C64 when I bought an Amiga. I used my
C64 every day and thought I'd do so after getting my Amiga, but I didn't
and soon after they stopped producing it! Same for the Zzap! 64 mag., I
think they quit just after I stopped buying it.

Hell, we should go on the stock market with this kind of timing!

Yes, I agree. The C64 version of Rescue on Fractalus and Ballblazer are
superior to the Atari's smoother moving ones.

One thing the C64 has, it's sprites. The PM's on the Atari is good for some
stuff, but has it's limitations. And the C64 has one music piece that I
enjoyed, even though the SID chip is supposed to be so great, I really like
what for example Rob Hubbard did on Jet Set Willy, Warhawk, International
Karate. Excellent work.

Colors? Where's the shades on the C64? Hmmm. Vastly superior, okay.

I heard that's not the real Clive. The real Clive died when doing
audition for becomming the 6th Beattle. He was replaced by his evil twin
brother.

You might be thinking of Ian and Duncan Smith, the twins who entered
british politics. One of them managed to get to be leader of the
Conservative party, although it's not sure which one it was.

> Same could be said for God, Jezus and the Holy Poltergeist and look

Well, I saw a posting in a newsgroup saying that allah is the one true
god, it's getting a bit crowded in the heavens with all the one true
gods that are knocking about, but if it was in a newsgroup then it
must be true.

So, it's his evil twin brother who came up with the sinclair research range
of computers?

Not evil in my book then. Maybe the real clive was the evil twin and his
good twin took over.
:-p

Worse I'm afraid.
You missed the news... 2 of them are dead, one of them reads thomas the tank engine stories and the other one formed "wings" with his late wife linda (who couldn't hold a tune in a bucket) and hasn't been heard from much in the past few years.

That reminds me of an excellent reader cartoon published in one of the

Speccy mags. Clive Sinclair was caught robbing banks, but they pulled
off the mask la Scooby Do to reveal Alan Sugar, who angrily
exclaimed "Blooters!".

I hope I didn't dream this.

Eq.

Hey everyone!!! We still have the IRC chat night going on each week,
on Thursdays, if anyone wants to come in and check it out. Official
gathering time is 8:00pm CST/CDT, and you have 3 options for getting
in:

- Use your favorite IRC client to connect to irc.newnet.net and join
channel #atari.

- Telnet from your 8-bit or other machine to irc.atarichat.net
(216.37.55.109) and login as "atari". This will get you into the chat
without the need for an actual IRC client.

- Use the Java applet found at http://www.newnet.net.

If you can't make it around 8:00 tonight, you can stop in at anytime,
somebody is usually awake. We are predominately 8-bit folks... but a
lot of us dabble in other stuff too. (Commodore, Amiga, STs, etc, etc,
etc) There isn't much we don't talk about. It is a lot of fun....and
very informative.

Hope you can come join us....we will be glad to see ya!!!

I always confuse the Smith twins, the Beatles and Sir Clive. They all do look a like and all played a crucial part in the 1st Gulf War. Ehm, I might be confusing them with the US army though, that happens too.

UPDATE: Telnet from your 8-bit or other machine to irc.atarichat.net (64.72.135.245) and login as "atari". No password is required...just hit enter. This will get you into the chat without the need for an actual IRC client.

The original post has the wrong IP... please make a note of this,
otherwise you will not be able to get in. Thanks... and hope to see
you there!

Ha ha, Acorn.

You got duped with that lemon.

Not one of ours either! And I doubt he is from the Atari group. Just
another brain-dead troll trying to stir things up.

BTW, did anyone notice this line in the header?

Actually... I don't know....it is the old server... my guess is it
won't connect at all.

Well a troll as I live and breathe.

The 800 xl was actually quite a nice machine. The old 800 had those stupid
keys and thus was worse tan the dear old Speccy.

Its a big beast though.

Brian

Expensive, but reliable and powerful DOS for that times HC.

The ATARI 400/800 Graphics Chipset started the race and ended it. Being
the all time First Place, except some nineties MSX trash, ten years to
late :)

> Even the Spectrum is far more powerful than the ATARI
> and the Spectrum users finally need a system to bash

It is, in various cases...

huh? Why should I bash an ATARI? That should remain to anyone self,
having an ATARI :)

> So, please, discuss the crapiness of the ATARI here:

I hardly imagine a crap going with the 8bit ATARI... maybe the Price.

Atari is broader. Faster.

IK sounded better (MUCH) on the Atari. IK+ Sound on the C64 improved
vastly, but missed the charme (slow, swaying forward backward sound) of
the former IK on ATARI Pokey. Faster and more hectic.
Like any Game on C-64.... The Sound was/is somehow alone and mainly out
of timing to that what's happenening on the screen :)

Although, a cross check to the AMIGA IK+ Version auds you, how a real
synthesizer sounds. The Paula Chip is by Miles away better... anyway.
Filter ON, of course!

Better a Sinclair Spectrum 128K and a TB-303. Then you can wild the
knobs, for a slightly better sound than the SID already had.

> Colors? Where's the shades on the C64? Hmmm. Vastly superior, okay.

Give the ATARI GfX Chipset a try ;-)

What's that? Chipset for PC? I guess you are not talking about ANTIC, are
you? I programmed the ANTIC and love it. Atari's have the most charming
chips I think. My first love was the Atari 800. More fun than I had with my
later wife

Does anyone know where I can buy an Atari 800/1200XL? Also are there
any reliable online venders to purchase hardware and software from for
the Atarin computers? Than ks in advance!

Brian

I suggest B&C Computervisions.
www.myatari.com

There's also Video 61 and Ben Smith are active.
For a comprehensive list of vendors, what they sell, where they're at, you might see the vendor list,
which is in the 'Welcome to Comp.sys.atari.8bit FAQ', here in this newsgroup.
And then there's ebaY.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

    Former (before 1987) Usenet newsgroups for Atari computer discussion:
      net.micro.atari8 - created Feb 1986
      net.micro.atari - created Nov 1982
      net.micro   - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce
  Atari related hard/software announcements. (Moderated).

I bought a regularly use an Atari 800, but if you hate it that means only more
for me. I tend to like underdogs anyway. ;)

Ever hear of the Atari Drop Test? I was running my BBS in local mode
at an Atari Show -- while the program was running lifted the 800 six
to nine inches off the table and let it drop. I will admit that the
program did stop and I had to type "goto main" at the prompt.

We had several DOSs -- Atari DOS 1 and 2 and 3, SpartaDOS, SmartDOS,
MyDOS, others.... I made a floppy disk that you could toggle (by
overwritting the boot sectors) to boot up in four or five different
DOSs.

But what I liked best about the Atari was the BASIC. All of the other
computers had to compile their programs to be able to run a BBS. The
Atari could run a BBS aat 1200 baud in plain old BASIC. You could
stop the program, modify it, and just continue. Which is why the
Atari, with about a tenth of the computer market, ran about half of
the BBSs early to mid '80's. In 1986 I had the world's fastest 8-bit
BBS -- running in interperted BASIC.

Hmm, that Atari "drop" test sure did change by the time it got to the ST
line.

There, if the computer *wasn't* working, you would pick it up 6-12 inches
and let it drop. More than likely, the computer would start working again.
(chip creep). Atari Corps own techs would recommend this procedure over
the phone.

Gotta love it. :)

 Actually, no. I "like" them because they run ALL the 400, 800, & 1200
Software and Cartridges perfectly WITHOUT ADAPTERS or CONVERSIONS of
any kind.
 I "need one" so I can do my R&D for "8-Bit Designs" for NEW ATARI
Interfaces.

Thanks,

Charles>8-Bit Designs

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

I give my dogs a worm pill once a month to eliminate parasites. :-)

Now, if we could develop a once a month post for the retro-systems newsgroups
that would have the same effect...

In my experience, the "parasites" you are talking about don't
visit newsgroups. They just watch eBay.

Most participants in csa2 are interested in using their machines,
not in selling them.

> 70 POKE 8,0
> 80 X=USR(40960)
>
> and then I have to reboot. This works with AtariBasic "C"

Try this program:

```
10 REM this program is saved as AUTORUN.BAS
20 MEMLO=$02E7:LOMEM=$80:INITBAS=$0470
25 _MEMLO=$3BFC:REM this is your new MEMLO, normal value is 13865(=$3629)
30 IF DPEEK(MEMLO)<>_MEMLO OR DPEEK(LOMEM)<>_MEMLO
35   DPOKE MEMLO,_MEMLO
40   DPOKE LOMEM,_MEMLO
45   RUN "D:AUTORUN.BAS":REM place name of this program here
50 ELSE
55   X=USR(INITBAS):REM this initializes TurboBASIC XL
60   RUN "D:PROGRAM":REM place name of next program here
95 ENDIF
```

So to reserve 192 bytes you would set _MEMLO=13865+192.

I used the above program to install device handlers. One was a memory handler that accessed the 1MB of ram I hand in my 130XE. If you have any questions about the example, let me know.

That's not actually true. Software that makes direct jumps to routines in
the 400/800 OS instead of using the vectors will not work on the 1200XL
without running a "translator" disk, which basically puts an 800 OS in RAM
under the stock OS.

> I "need one" so I can do my R&D for "8-Bit Designs" for NEW ATARI
>Interfaces.

Get yourself an 800XL, cheaper and easier to come by.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers

sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

When I restarted the DarkForce! BBS, it was for the
same reason that I first started it up in the early 90's.
Namely, to contribute to, participate in, and give back
to, the Atari community, all that I've gotten from it.

With that in mind, here is what DarkForce! did in the
year 2006:

January 2006
1. $25.00 - Slor
2. ST Mag - Doc Rotcod

February 2006
1. $25.00 - Morden
2. ST Mag - Showa

March 2006
1. $25.00 - Mark Chitti
2. ST Mag - Arch Mage
3. DGS 8Bit CDROM - Stephen

April 2006
1. $25.00 - Slor
2. ST Mag - Sthelir

May 2006
1. $25.00 - None (rolled over to next month)
2. ST Mag - J_D
3. PEST   - Zeptari
4. USBcart - almostrice

June 2006
1. $50.00 - None (rolled over to next month)
2. ST Mag - DocClu

July 2006
1. $75.00 - AlmostRice
2. ST Mag - Pantera

August 2006
1. ST Mag - Gemini8

September 2006
1. ST Mag - Wulfie

October 2006
1. ST Mag - Dew_it

November 2006
1. ST Mag - Sauron

December 2006
1. ST Mag - Callaghan
2. Mega STe motherboard - Doc Clue
3. Guderian (8bit game) - JeLLe

Glad to be of service, folks! :)

Actually only games ported from the C-64... :)

I don't know if this is true, but I've heard that PEEKing certain
locations might reveal hidden words or messages by the programmer(s).
Has anyone ever heard of this?

If you have a monitor like Omnimon or the emulators you can look at
memory - peeking will just return numeric values which could
correspond to ATASCII of course.

Some I've seen over the years:

Pharaoh's Curse: SYNISTOPS (That's the level 3 code)

Alley Cat: Why did the pirate chip his teeth? He was trying to blow
the vibrator. (Or some thing similar!)

Thanks to Pharaoh's Pyramid, which unlike Electronic Arts games which
just said "REMOVE CHIP AT $C000" in the disk sectors, Pharaoh's
Pyramid named the chip at $C000.... Omnimon. Made us wonder what's
this omnimon thing......

Hmm, don't know about the 8bit, but the Amiga certainly had some (some of
the same 8bit programmers) and the ST had this (from Wikipedia):

"The standard 8x8 pixel graphical character set for the ST (the main

in-ROM "font" for GEM, and text-mode TOS operations) contains, following all the standard numbers, letters, symbols and accented characters, four unusual characters. These can be placed together in a square, forming a basic but recognisable facsimile of the face of J. R. "Bob" Dobbs, the supposed founder of the Church of the Subgenius"

I think I remember accessing the face from within Atari ST BASIC, but I always thought it was one of the Tramiels. :)

Last-modified: March 8, 2007

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this

line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great
Renaming) as a direct replacement for: net.micro.atari8

    Former (before 1987) Usenet newsgroups for Atari computer discussion:
      net.micro.atari8 - created Feb 1986
      net.micro.atari - created Nov 1982
      net.micro   - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management
Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce

Hi,

I'm looking for information (best a scanned handbook/documentation, or
list of possible commands) for the Atari Calculator Program (from 1979,
Article CX8102). This might be the same software as APX 20130, but I'm
not sure. Can anyone send me information on this?

Best regards

Carsten

I've asked this question before - a few years ago - and the answers were helpful but a bit confusing. I'm considering buying some NTSC Atari 800 game carts for a PAL system - the PAL carts are more difficult to obtain.

When the Atari 400/800 were marketed in the UK the advice from Ingersoll and then Atari Corp was clear: NTSC carts will not work on PAL systems.

I've heard however that this isn't true and that the NTSC carts will work - that there is actually no difference at all between the hardware or software of the carts.

Can anyone confirm this with any certainty - will NTSC carts work on a PAL system? Has anyone used NTSC carts on a PAL system with success?

Gareth.

I have not come across any cartridge that did not work on PAL machines.
There's a problem with some Atari 800 games on XL/XE systems, I think Demon
Attack and some others that need a translator.

Also, I know some demos (not talking cartridges here) and games written for
PAL machines won't work on the NTSC ones, because of the difference in
50/60Hz and the time available in the VBI.

So, NTSC isn't the problem, being an older cartridge, might be, because of
some difference in addresses in the hardware.

Anything special you look for?

Thanks for the information. It's odd (and, it turns out, very misleading)
for Atari Corp to have said that NTSC carts wouldn't have worked on PAL
systems.

Yes, I'm looking to replace my entire collection that was damaged some years ago! Some carts are pretty difficult to find although they do appear on eBay from time to time - Donkey Kong Junior, Popeye, Necromancer and many others. They are mostly sold by people in the US. Often the shipping cost is more than the cart and, for an expensive/rare cart, the customs duty and collection fee makes it even more expensive.

Gareth.

It is with great sadness that, after years of saying I would do something with this stuff (haven't done anything serious with it in 10+ years), I need to part with my collection of Atari stuff. Got my 400 in 83 or 84 and had a lot of fun all the way through college where I added to my collection through a box of stuff found in a house I moved into (XF551, XM301, Apefaces) and benefiting from the University selling off their old atari stuff for $10 per item. There were actually professors still using them in their offices for word processing in 1990 even though the university had a massive deal with AT&T for PCs and Unix boxes.

I'd prefer to unload the whole thing at once and not have to ship anything. Therefore, if there is anyone in the Chicago area (or within a 4-5 hour drive), I would accept a reasonable offer and deliver on a weekend day. Otherwise after May 1st, I'll accept reasonable offers on parts of the collection.

Rob

Here is what I have:

(1) Atari 400 (48K upgrade (Axlon?), case has seen better days)
(1) Atari 800 (one or two keys are loose but functional)
(1) Atari 800XL
(2) Atari 1200XL

(2) Atari 1050 (no enhancements)
(1) Atari XF551

(1) Atari XM301

Have the power supply for the 800, think I am one short for everything
else though.

(3) Apeface Parallel interfaces (never got them working, not sure if they
work)

(2) Gemstick Joysticks
(2) Wico Bat Joysticks with changable grips
(1) Other joystick

Ton of disks that probably don't work
Books (incl. Compute's First & Second, First Book of Games)
Atari Writer Cart
Visicalc Disk (don't remember if I ever used)

Cartridges, most in poor shape, but functional:
Buck Rogers
Krazy Kritters
Gorf
Aliens (?? not sure label is missing)
Galaxian
Asteroids
Jumbo Jet Pilot
Soccer
Basic (for 400/800)
Qix
Donkey Kong
Star Raiders (of course)
Pac Man
Centipede
Kickback

Back when I was a wee lad I had a song called Tico-Tico or
Tiko-Tiko...can't remember.....that was written in BASIC. I recieved
it on a local Atari Club monthly disk, so not sure if it was just a
local thing. It was a really catchy tune, so I am hoping someone may
have come across it and can help me get a copy.

Thanks,

Aaron

I believe that is/was true for the 2600, but not the 8-bit computer.

That's correct, as well as the 7800. The 2600 do play the games, but often
with pink superman or smurf, so the colors are off. 7800 games just doesn't
work. 5200 is of course only NTSC, never released in Europe, so they are no
problem.

AWESOME!!! Thank you so much. I just had a majhor nostalgic moment,
and it stopped my 4 month old from crying. :)

Though it seems a little slower than I remember it. Sounds about
right when I kick the emulator up to 115%-120%. Maybe I am just
remembering wrong.

Well, "Easter Eggs" aren't that unfrequent, actually. I don't know
whether the
Atari had any easter eggs that were added on purpose, but for example
the last couple of bytes of the Rev.B Atari Basic contains characters
that look like a high-score table of sorts. ("Winner" in Atascii code!)
Probably the author played a game before making the final cart dump for
production. (Rev.B is the damaged version with broken memory copy
operations that hangs up from time to time, thus the "looser" edition.)

The AmigaOs had a couple of them, too, but that's off-topic.

So long,
     Thomas

(And Happy Easter, this fits perfectly!)

Cool, thanks. Didn' t know about those. I'll add them to the list:

http://www.digitpress.com/eastereggs/

Do you or anyone else know of any that aren't listed there?

Btw, the Alley Cat message is Q: Why can't a pirate use a dildo??
A: Because it chips his teeth."

And Pharaoh's Curse has "By Mike Potter" listed twice in the code,
which is strange since the title screen says "By Steve Coleman"

I just checked the Rev B rom in a hex editor and it shows ",7inner".
Not sure what to make of that. The other revs don't have text at the
end.

In ASCII, not in the Antic character encoding. In Antic's encoding
that's "Winner". (-:

Maybe on a NTSC machine it runs faster? Is you emulator set to PAL or NTSC?

Or maybe you ran it in Turbo Basic? Or compiled?

I got my 1200XL today with APE Warp+ installed. I'm happy, very happy. =
I think my 800XL has a problem because the 1200XL plays more games from =
the Spudster collection than my 800XL would. I'm also very happy with =
the APE Warp+ OS that is the default OS with the add-in board, it's fast =
and it appears to be very compatible with 800 software.

I'm actually HAPPIER with this purchase than I thought I'd be! The only =
thing that bums me out is the joke documentation that Atari included as =
an owner's manual. Other than the special key combination page it's =
useless.

No, I was in NTSC. The version I, had all those years ago, may have
been tampered with before making it to me, or this one may have been.
Or I am just not remembering it correctly.

In both Savage Empire and Martian Dreams, the "Worlds of
Ultima" Origin games, the following text can be found in the
file GAME.EXE: "Winona Ryder is a really hot babe"

I don't know if it is possible to actually get this text on screen,
though.

A quick Google search says that these people found it, too:
http://shiftedphase.com/dino/ultima/se/fun.php
http://www.reenigne.org/computer/u6maps/index.html

bye
Marcus

Guys,

Developing a bittorrent site devoted to distributing classic computer
related material - it's in test mode at the moment at
http://landover.no-ip.com:6969 - test it out if you will (try uploading
too). Any comments (good, bad or otherwise), there's a forum attached.

cheers,

Lance

I can't remember offhand, but is there a way to disable the keyclick from
the internal speaker on the 800 short of disconnecting the speaker? I know
you can on the XL/XEs, but couldn't recall a software method to do this on
the 800.

Thanks.

-Jason

The only software method I could think of is to replace the Os K:
handler (at least partially) not to call the keyclick routine.

I don't know if it works on an 800 internal speaker,
but 731 0 click, 255 no click. I have in my notes.
Maybe that just works on XL/XE monitor clicks.
Give it a try and let us know if it works, please.

That's the XL Os only. Os/A does not check for this location,
unfortunately.

Hi folks,

a new release of the C++ based atari 8 bit emulator has just been
released. You find it at its web page at:

http://www.math.tu-berlin.de/~thor/atari++/

Credits for this release go to Waldemar Pawlaszek for detecting
and fixing several bugs in the 65c02 emulation code, thus the
CPU emulation for the advanced member of the 6502 family has been
reworked heavily.

In addition, the interface to the monitor/disassembler has been
reworked as well to ease the integration of other members of
this family.

Have fun,
     Thomas

Yeah, I tried 731.

Location 731 was listed in the XL/XE addendum to the Atari memory map. I
tried putting non-zero values in there anyways but they have no effect on
the 800.

Maybe I should just put a potentiometer on the speaker wire so I can adjust
the volume.

Thanks.

-Jason

You're remembering correctly.
The one you remember has Antic turned off.
You can modify ticotico.bas like so:
1 X=PEEK(559):POKE 559,0
222 POKE 559,X
Now it will play almost twice as fast.
TICOTICO comes on a 'SuperSynthesizer' demo
disk with about 15 other tunes, and it disables
Antic.

> any kind.

Actually, the incompatibility problems were so bad with older 400/800
software that the running joke was the 1200XL was the only computer
that was incompatible with itself ;). The 600XL and 800XL weren't
much better, which prompted Atari to issue free Translator disks
(which contained 2 different versions of the 400/800 OS - A and B).

Hey all, Im still clearing out my shelves. I just threw up 8 SSI
bookshelf games, most are for the Atari 400/800. Titles like Carrier
Force and Battle for Normandy. Check 'em out!

I put a switch on mine back then, which turned out to be many switches
on my 800.

And there is a way to turn off the speaker iam sure, as we made a few
programs to use the internal speaker as stereo with the monitor
speaker.

that was well over 20 years ago, lol

mike

If you know of a simple way to do so, please let me know. I know some apps
turn it off (PaperClip for example), but my assumption is that this is
because they are bypassing the K: handler for keyboard input.

I found this little snippet on an old floppy labeled RAG USERGROUP. The
only thing I changed was the drive designation from D4: to D8: for my ram
disk.

```
DPO.82,9985:CLR:DIM N$(8),F$(19):N$="D8:DIRX3":CLS:? "DRV(1-8)":GET
D:F$="D":F$(2)=CHR$(D):F$(3)=":*.*":CL.#1
OP.#1,6,0,F$:DO:IN. #1;F$:IF F$(1,1)<>" ":EXIT:ENDIF:?
F$(2,14);:LOOP:DPO.82,9986:GET D:E.N$
```

Name this file DIRX3 save to D8: load Turbobasic and ENTER "D8:DIRX3

Far out! What a nifty thing to do. Not that you are going to get high
fidelity with that rinky dink little speaker in there, but the
creativeness of this is very impressive. Tell us more? Was any music
made with this?

http://rtdos.com/tiki-index.php?page=The+BASIC+Language+Retropedia

working on a retropedia of sorts for the basic language; what we are trying
to do here is create a xref system of the different commands each dialect of
basic used and how each dialect of basic used them. we're trying to cover
all basics for all machines (from the first machine that used basic up until
as recent as possible or feasible); back in the early to mid 80's there were
TONS of books on the subject and we're trying to re-create that here (since
most other classical computing sites contain information on the various
machines we are trying to gather programming information on these machines

so, no, we're attempting to NOT duplicate the same information on other
sites although we'll link to these sites when necessary, possible, and or
allowed by these other sites).

I still need the ATARI 1200XL Computer! Does anybody out there have
one for a reasonable price??? This includes ones that work internally,
but need keyboard work done to them as I need the motherboard and
casing mostly!

Please send me an email and let me know if you have one that you are
willing to part with!

Thanks,

Charles>8-Bit Designs

Hello All,

I have an overstock of Atari 8-bit to RCA/Phono TV cables (2 metre/6.5')
which I am clearing. Prices start at just £1.50 delivered. This offer is
only available to readers of this newsgroup, so you will need to visit the
offer page directly:

http://www.dgs.clara.net/RCA-a8-Apr07.htm

Payments are by PayPal only in UK Pounds. Payment buttons are included on
the page, or you can PayPal the money directly if you prefer. Cables can be
shipped to the UK, Europe, USA/Canada, and Australia/NZ.

I have other types of cable too, which are sold through eBay:

http://search.ebay.co.uk/_W0QQsassZdeangarraghty

Or, for US users:

http://search.ebay.com/_W0QQsassZdeangarraghty

Dean Garraghty

I recently aquired a 512K Axlon caompatible memory board for my 800. The only problem I've noticed thus far is that BW-DOS hangs during bootup when the board is enabled. It has a switch to disable access to the extended banks and act like a normal 800, and when this option is selected it works fine.

Does anyone else have an Axlon type memory expansion for their 800, and do you also get this behavior under BW-DOS? If so, are there any patched versions that work with Axlon type boards (and maybe support it as a RAMDISK)?

Thanks.

-Jason

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

Something like that Axlon expansion would have a driver wouldn't it?
Have you got the driver or instructions to tell you whether there's a
driver?

Cheers for using BeweDOS, the great low overhead command line DOS for
Atari 8bit.

Actually, there is no driver for accessing the Axlon memory (mine is a Magna
Ramcharger, but it is Axlon compatible).

The Axlon model is similar to the 130XE method of bankswitching, in that the
bank from 16384 to 32767 is swapped with 16K banks of extended memory.
However, instead of a few bits from PORTB being used to control bank
switching like on the 130XE, the entire byte at location $CFFF (53247) is

used as a bank control register. A value of 0 means the main/normal bank is
active, and values from 1 to 255 cause an extended bank to be selected.
Since my board is 512K, banks 0-31 are valid. This method can support up to
4MB of RAM, where values of 0-255 would be valid.

$CFFF is available as a bank control address because on the original 400-800
memory map, the 4K block of address space from $C000-$CFFF (49152-53247) is
unused. When the XL OS came along, this address space was used by it and
these locations were no longer available for such purposes.

I'll be trying to send a 23k zipped Axlon.atr to you by email which
has 315 sector docs file from Axlon on their board which banks from
CFC0 thru CFFF and has a mirror for that banking register at 0FC0 thru
0FFF which is right in the middle of DOS. YIKES!!

Thankfully my 'compatible' is NOT banking at 0FC0 thru 0FFF as the
Axlon does but mine does bank at CFC0 thru CFFF just fine. Mine is a
128k custom home rolled and does lock up booting 1.30 BW-DOS with the
memory switch OFF. Don't ask me how or why, I don't understand it
either but since mine does maybe you have your switch orientation

backwards too?

In the Axlon atr is SpartaDOS 1.1's RdAxlon.com which only supports drive 1 thru 4 at the size of 128k only, that's the ONLY Axlon ramdisk driver I know of, I'll try to put something better together. Support for Axlon on MyDOS is not good enough either which I'll also try to fix with another version of MyRd2.AR0 posted for download at Mathy's MyDOS page.
http://www.mathyvannisselroy.nl/mydos.htm

Anybody else want the zipped Axlon.atr file just post your munged email address such that I can figure it out or contact me at lee_454_AT_yahoo_dot_com using AXLON in caps for the subject line.

Thanks for the info and file Lee.

Actually, I have an original copy of SD 1.1, and that along with its Ramdisk driver works fine with the board (but limits the Ramdisk to 128K) under SD 1.1. If you have SDX, it would be interesting to see what that does.

Since my board has 512K (32 banks), your are correct that bank values of 32-255 repeat 0-31, since the upper 3 bits of the banking register are ignored. Only on a 4MB board would 0-255 each address unique banks.

I don't think the switch orientation is backwards. When extended mem is turned off, BW-DOS works, but the machine is only a standard 48K 800 at that point. When turned on, BW-DOS hangs.

The "Stereo Sound" music demo would play on the TV speaker and the keyboard
speaker. And yeh, on my 800 I've had a three position switched added for no
sound, normal sound, and loud.

Just chiming in... not really adding anything new to the conversation. ;)

Oh yeh, Ice-T and Flickerterm have an option to kill the keyclick if you want to. So there is a DEFINATEKLY a software interrupt to make this happen.

Hello All,

I'm desperately trying to get North Atlantic Convoy Raider to work on
my PC using an Atari emulator. Unfortunately, no matter what I do, I
can't get it to work. I have no experience working with Atari
computers, so I'm hoping that someone can tell me what I'm doing
wrong.

1. I'm using Atari800Win
2. I downloaded the ROMs and loaded them into Atair800Win. The program
accepted them so I
    believe I did it right.
3. I downloaded North Atlantic Convoy Raider (tape version) (unzipped
the file) from:
    http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=3727
4. Ran Atari800Win. Screen displays: "Atari Computer - Memo Pad"
5. I choose FILE from the menu and then ATTACH TAPE. I then located
North Atlantic Convoy
   Raider from my computer directory and selected it.
6. I then select AUTOBOOT IMAGE from the file menu and chose the North
Atlantic Convoy
    Raider file again.

Unfortunately, the Atari screen goes blank except for the cursor and
nothing else happens. What am I doing wrong? What do I need to do?

Any help would be greatly appreciated! Thanks!

Mark

After attaching the file, try Shift+F5 to reboot.

Hi,
This is from the help file for the emulator:
To boot the tape, hold Atari Start key (F4), while performing cold start
(Shift+F5). Then press Space key. Or just use File/Autoboot image (Alt+B).
but,   depending on which version of the emulator you are using the start
key might be (F2)

Good luck a lot of the better games came on TAPE..

That is all.
Any more ideas?
Thanks!

No success!
I tried both F4 & F2 while pressing Shift-F5 then Space. Nothing. A
return to the MEMO screen. Same with Alt+B. I'm thinking perhaps the
downloaded game file is bad?
Thanks!
Mark

You're busted. It doesn't work in atari800winplus.
It is a BASIC file, and a800wpl only seems to know
binary load cassette files. You can get the BASIC
file, (I have it), then just load a DOS disk with it on it
and do a normal LOAD "D:NAC.BAS".
This is somewhat problematic, because the BAS
file from Holmes has a really long name, you have
to rename it to a 8.3 format before writing it to a
disk image. Uhm.. Holmes has an .ATR of it,
so I guess that has the BAS on a bootable disk image
for you.
You have to have BASIC enabled, that's one thing.
Another thing is you are getting MEMO PAD, which
is emulating the 800, rather than 800XL.
If you like I can e-mail you a boot disk to use.

SOMETIMES the SIO patch needs to be checked or unchecked. Try that out.

Worked ablsoutly fine for me Mark when I opend it and sent you the
listing. Make sure you have ATARIBAS.ROM as your Basic Rom, attach the
tape, press CLOAD at the ready prompt - press space bar - after a few
seconds it will be loaded - type Run

Bill H

I couldn't get it work (the .cas file).
I tried a lot of things to get it to work. I ran the
BASIC file fine, from Holme's archive.
If you like sea war, you might like 'MIDWAY',
it is convenient in that it has doc on disk as well
as a program disk. It is mostly carrier action,
but will resolve surface action as well.
Then there's 'Warship' and 'Bismarc', which is
surface ship war, there's extensive documentation
for them, that might be hard to find. And 'Gato' for submarine warfare.
Gato was a 128k cart.

It works fine if you follow the instructions: just CLOAD the game and
RUN it, nothing complicated if you're used to the A8...

> then just load a DOS disk with it on it and do a normal LOAD "D:NAC.BAS".

You're making things more complicated than they are: you can either
use the virtual hard drive option or load your BASIC file as a tape
image (yes, it works).

I'm quite familiar with Atari 8-bits. And I tried
a simple File/Attach tape and give the NACR.CAS
I got from atarimania and re-named NACR.CAS. Uncheck 'disable BASIC' in the
Atari/Settings.
Then boot to READY, then CLOAD and get
error 138 (device not ready) or ERROR 21
(not load format).
Also, I have no disk in D1:.
If you see anything better, lemme know. It isn't
more complicated to get the BASIC file and put
it on an image and load it from READY prompt.
If there's a way to directly load a BASIC file from
at800wplus 3.1, I dunno.
Regards
in the Atari/preferences. Don't mess with SIO patch.

Shoot, I knew I'd leave something out.
I hit the spacebar after typing CLOAD ENTER.
Then there's about a 20 second nothing, then
ERROR 138. or ERROR 21 or some other ERROR.

You can start by emailing the enemy with the wrong place to meet with an
Atari. When he gets there, clock him over the forehead @ 1.79Mhz and then
cut him up with an Atari 800 cartridge door heat sheild..

I don't know what you're doing wrong and why you want to rename the
file either... Again, works fine here with Atari800Win PLus 4.0, maybe
it's because you're still using the old 3.1.

Make sure your disk drive is turned off, load in 800XL / 130XE mode
(or you'll have to attach a BASIC cartridge) with SIO patch enabled.
The rest is the classic CLOAD / RUN operation.

> It isn't more complicated to get the BASIC file and put it on an image and load
it from READY prompt.

Come on, how is inserting a tape image, typing CLOAD and RUN
complicated? It's also pretty uncool of you to say that when people
like us as well as contributors have been working THOUSANDS of hours
to archive and preserve ORIGINAL software titles like this one.

Thank you everyone! I got it to work.

Apparently, I was in the MEMO screen when I needed to be in the BASIC
screen (I didn't know there was a BASIC screen). Once I was in the
BASIC screen, everything worked just fine. I attached the file. typed
in CLOAD. Waited... Typed RUN and it worked. Simple as pie!

Thanks again for all your help! It is much appreciated!

Mark

Hardie har.
Thanks Frog and Mark. I still don't know what
my problem is, maybe 3.1. I found 3.1 to be less
likely to crash than 4.0.
Frog. I don't know what is uncool. But I'm old
enough to not be cool. The original poster got
what looking for, needed BASIC. Which I mentioned.
I'm not going to try 4.0, I've already tried it.
Heh, 1000s of hours. I'm sure I've spent many hours
doing Atari stuff also, including having a pretty good
archive.

Hi Guys,

Just thought I'd let you know that the Atari version of North Atlantic Convoy Raider (NACR) and the PET version are totally different. Why? I do not know. The Atari version is better as it has more features. Each version handles the play differently. Why Avalon HIll chose to do this baffles me.
Thanks again for all the help!

Mark

Hey guys,

We're all glad the original poster achieved success.

I played along myself. I don't consider myself a big emulator expert ye=
t, =

but I've been using this one more and more. This was my first time tryi=
ng =

to do something with a .cas image. But I'm also plenty familiar with th=
e =

Atari (though probably less expert than Russ in many ways).

I found it pretty difficult to get this cassatte image running, though I=
  =

finally did.

I'm using A800WinPLus 4.0 on Win98SE.

Playing with the same image:
http://www.atarimania.com/detail_soft.php?MENU=3D8&VERSION_ID=3D3727

Can we just load the .cas image the way we do with other types of images=
  =

like ATR? That was what I first assumed, since I've looked at lots of A=
TR =

and executable files this way. But no, that didn't seem to work.

Can we use the Attach Tape Alt+T function to attach this tape image as =

suggested? For me, trying this crashes A800WinPL4. Hard. (Then, upon =
 =

running the emulator again I made the mistake of agreeing to reset my =

prefs, which caused it to forget where my ROM files were, so I had to =

figure that out and set that up again.)

Ah, there's another way. Within the emulator, under the Atari menu, =

select Tape Recorder... This brings up the "Cassette Control" panel, =

where you can Browse for a cassette image. With BASIC up and running, I=
  =

browsed and selected our raider.cas image. Then, finally the CLOAD =

function worked, and I was able to run the file.

My take: Yes, it works. Easy? It could be easier; it could be drag and=
  =

drop.

And my consistent emulator crashes when I tried the Alt-T attach functio=
n =

with this image can't be the way the emulator is supposed to behave.

But now at least I've leared about the Cassette Control dialog box!

-Michael

I added Atariwriter to my Easter egg contest page - if anyone can
figure out how to trigger the eggs within, I'll pay them $50:

http://www.digitpress.com/eastereggs/eastereggcontest.htm

And considering some (or all?) of the eggs may have been removed from
some of the released versions, I'm also making available a late
prototype version which should have all of them:

http://www.digitpress.com/eastereggs/atariwriter_proto_rev7.zip

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer

I'm looking for a nice 1200 XL.

Any potential sellers? If so, please reply to this via "reply to author."

P.S. Due to postage, US/Canada, only, please.

Price depends on condition -- I'm quite willing to pay the going prices.

-Larry

I have the 1200XL that ran the SWAMPS BBS until it was replaced by the
130XE. $50 delivered by motorcycle courier.

Hi!

I'm looking for the R-Verter driver source code. Finding the object
files is no problem, but concerning the source I got as far as finding
out it was developed by S*P*A*C*E (Seattle & Puget Sound Atari Computer
Enthusiasts) and one should contact them to get the source.

Does anyone have the source or some contact information?

so long & thanks,

Hias

Did you happen to see that movie or are you familiar with
the term "Butterfly Effect"? Goes something like: A
butterfly flaps its wings in China and the resulting
wind currents and eddies cause crop failures in the USA.
There's also the "For want of a nail a horseshoe was lost.
For want of a shoe a horse was lost. For want of a horse a
rider was lost, ..."

The teaching credential set in motion a goofy chain of events
that ended with 'the little woman' finding my Cybiko. I
guess its just me but I find that type of causality
interesting. I'm a slave to serendipity.<grin>

I've found recently that I don't just miss some of the
older stuff because of nostalgia, but because there
were practical needs that were served by old hardware
that aren't being addressed now. Cell phones are
coming close though.
> So, you take the test, pass it, now are you ready

It'll be another couple of weeks while the state
does a back ground check before I'll get the
credential.

I hear what you are saying about the current state
of the school system. California is so bad they are
trying to recruit teachers from the mid west. We are
rated something like 48th out of 51 states in education.

The joke was the California Teacher's Association<the
union> had the saying "Thank heavens for Mississippi!"
about 10 years ago as Mississippi was the only state that

consistently scored lower then California. The irony
is we are now ranked below Mississippi.

I don't expect to do well, it is just I am expected
by family and friends to try. I'm pretty good dealing
with failure. Three members of my family are/were
teachers and one gave it up because of the problems
with students like you mentioned and autocratic faculty.

I am sort of qualified IMNSHO to teach most subjects except
English, a foreign language of any kind, and history. I have
had literature courses through the graduate level but I
suck! I've had a year of both German and Spanish but forgot
everything I ever knew. It isn't easy taking 200 college
units and only having a bachelors. You got to take a lot
of stuff outside your major!

Strangely enough, my Sister in Law who was a phys ed
major ended up being a history teacher. I could fumble
my way through most science, math, shop, type stuff w/o
too much trouble. I wouldn't mind coaching a sport a
bit either. Figure I am close enough to collecting
social security that I don't have enough time to make
it a real career.

Starting pay for a teacher sucks so bad I can see why
they are having problems. You need to make ~$160k/year to
qualify for the average California home. Starting pay for
a teacher is only ~$40k/year so no one in their right mind
would take a job here. Pay is 20 years behind the private
sector. I mean illegal alien day laborers typically get
$80-$130/day. Substitute teachers with their degrees,
credentials, and legal status only get ~$125. Since I am
not of a right mind, I am a perfect candidate!

Rick

One thing I've noticed is the large amount of whining going on in these =
groups about the cost of classic computer items. I don't know what =
people expect, but I expect that the majority of people have no clue how =
much old stuff is worth, don't want to be bothered with figuring it out, =
and definitely don't want to be bothered with selling it in any way more =
complex than a yard sale. So, I would say 95% (or more) of the classic =
computers sitting in closes the last 20 years have made their way to the =
local landfill. Given that some things like Atari 1200XL and Commodore =
Plus/4 systems didn't exactly set sales records, I find it amusing (and =
a little annoying) when people complain about the prices these now rare =
items fetch on eBay.

Personally, I see a hobby--any hobby--as a way to spend money to get =
pleasure and have fun. We certainly don't collect classic computers for =
the economic benefit because even if you can sell an item for 100% of =
your acquisition cost on eBay, most of the items you can do that with =
are so rarely available that you can't sustain an economy on such =
activity. So, you have to think about __why__ you collect older =
computers and whether or not your budget and lifestyle can support that =
hobby. Collecting Commodore 64s is a lot cheaper than collecting Atari =
1200XLs. Why? Even if 95% have been chucked in the garbage, 5% of 22 =
million is still 1.1 million samples available. I would imagine the =
number of 1200XLs available numbers in the thousands, if not hundreds.

If you cannot afford this hobby, you should consider something a little =
less economically taxing. I can understand the love of the computers =
and the experience, but almost everyone has a PC and the emulators are =
so good for these classic computers that anyone who's financially =
strapped could get just as much usage enjoyment from emulators as with =
the real thing. If you've got to touch a machine to be happy, then you =
need to figure out a way to make the economics work for you and deal =
with the reality that any item is worth what its purchaser will pay for =
it. If a PET goes for $1700 on eBay, then that's what that PET was =
worth.

If that was a case we wouldn't have a stock market. The stock market's =

whole premise is to set and track the value of a share of stock of each =
listed company. If I pay X, and you are willing to pay X+1, then the =
new price is X+1 and the index goes up. If you can't sell it at X+1, =
then the stock becomes devalued to X-D where D is the devaluation of the =
stock.

The point is that you can't whine about a stock being $100 a share when =
you think it should be $20. The same holds true for every other product =
in a capitalist society.

Sorry. It *is* the case.

If 50 sold for $1700, it would be closer to what it is worth in the
market place..

And the point of your post was??? As far as I can tell your advice to
everyone is that if you can't afford to buy things at ebay prices,
then go do something else? Wow, thanks for that little nugget of
wisdom. I think my life is now complete...

On a side note, I don't recall too many people here complaining about

prices. Maybe the odd "Why does an old Apple II go for so much?" type
of thread, but that's about it. Aside from original Apple II's and
maybe some of the Applied Engineering cards, Apple II collecting is
actually pretty cheap.

> If you cannot afford this hobby, you should consider something a little less
economically taxing. I can understand the love of the computers and the
experience, but almost everyone has a PC and the emulators are so good for these
classic computers that anyone who's financially strapped could get just as much
usage enjoyment from emulators as with the real thing. If you've got to touch a
machine to be happy, then you need to figure out a way to make the economics work
for you and deal with the reality that any item is worth what its purchaser will
pay for it. If a PET goes for $1700 on eBay, then that's what that PET was worth.
>

No, the problem is that certain "collectors" like to buy up every
single SX64 or other collectible item that they can find at average

prices, and then list them one after another or even at the same time
at very high prices.

What this does is effectively make it *LOOK* like these computers are
worth is a lot more than they really are (whether they actually sell
or not). Other sellers see the auctions and think that they too
should list a C128 for $269.   It's obvious they are trying to over
inflate prices so they can turn over old hardware rescued from a
dumpster or good will for fat profit.

Personally I find $200 for a 1200XL "in great condition in its

original
box" rather cheap. Its ok to try to negotiate a low price, of
course... ;-)

Also I thought you might find this amusing:

And, just for precision, the selling price of an item on eBay is set
by the *second highest bidder*, not the highest bidder.

BTW, this thread is much less relevant to the comp.sys.apple2 group,
since I see practically no whining about prices here (maybe some mild
amusement about every month or two). Crossposting a thread like this
(with an emotional level of 8 on a scale of 10) seems more like a
troll than a post. Each old computer's market is quite different
in its dynamics, so, if necessary (?), it would have been better to
introduce this question *separately* to the various forums, rather
than crossposting.

As it is, I expect a small torrent of postings to csa2 that are almost
totally unrelated to the Apple II or its "marketplace".

Future responders may wish to consider "turning off" some of the
crossposting...

Ultima stuff has been very collectible for a long time. The big box
version of Ultima][in this condition I would expect to fetch the
$493.88 that it received.

Are the Ultima games really worth that much?

Might be time to sell mine and retire. I have Akalabeth, Ultima (before it was a
One), big box Ultima 2, Ultimas 3, 4, 5, 6... All but six is for the Apple. All
the bits and pieces too. I even have the poster that was in one of the computer
magazines.
I also have Martian Dreams. I really liked that game.

My whining is not so much what others are paying for their
Commodore stuff, Its just that I can't find *that buyer*. Recently,
a SCPU128 installed in a flat C128 went for over $1100 on EBAY.
About 10 years ago, I sold roughly the same item for $300. At the
time, I was stupid enough to be glad that I got that. Sombody paid
$60 for my AMIGA 500 with an with mouse, original work bench 1.3
disk, external disk drive, and an AMIGA 1200 baud modem.ten minutes
later somebody sold his A500 with over a hundred games for more thaqn
$150. How come that guy chose to post his item 10 minutes after I
posted mine? Our items reduced the price of the other guy's item.

It's NOT FAIR!!!

I NEVER have no FUN!!!

While we're being fair ;-), I note that the Apple II community is quite
distinct from the C64 and Atari communities, with only occasional points
of contact that tend to be quite pragmatic--like 6502 interfacing or
mutually relevant documentation.

This is why I suggested separate posts to relevant newsgroups, since
most market-related discussion will not be relevant to other groups.

Yes, Ultima games are very popular for collectors. The CPC version of
Ultima, in good shape can fetch in the $1000 range these days. Either
one of the two versions of Akalabeth that CPC released for even more.
However the Holy Grail of Ultima collecting is the self-published
version of Akalabeth that Richard Garriott sold on his own when he was
in high school. He only made about 20 copies.

I have also noted the recent absence of older computer items from
the local thrift stores.

However, they seem to be going straight to electronics recyclers.
They are deemed "obviously worthless" since you can't surf the web
with them. ;-)

Only a tiny percentage of donated old machines ever find their way
to any "marketplace".

Do what I did - post to the relevant newsgroup and go through
responses to try and find someone that is not collecting them for
resale or closet storage. I've got too many C= 64's and would gladly
sell some except that there are too many of them on the market; the
Vic20 package though - maybe not.

If enough of a given group (atari, apple, commodore) start bypassing
ebay and sell their stuff reasonably of with additional conditions
(eg: good home) then this problem will go away.

Actually retro computing needs to be seen like antique car collecting. When I
see a model T on the road on a night day where people go cruising that is about
how I feel taking my Atari 800 out onto the internet.

Not a cheap hobby, but fun.

   He was talking about Duke Nukem *3D*!!!

   Yeh, you know, such a game, once you got past the loopholes you'd have to
   jump through converting a game usually on a low end 386 to a high end 8-bit
   computer... you could probably put this on a 8-16 mb compact flash card that
   could be plugged into the MyIde/compact flash-IDE converter combo that many
   8-bit Atari users are using these days. :)   To matter the fact many
   complex LARGE image games could be sold this way.

   And why hasn't anyone hacked a DAT player to work on the cassette channels
   yet? Think of all the days of music you could pipe in that way? :D

I know, I was playing ignorant instead of admitting Duke Nukem (3D) cannot
be implemented (at least not for 16k Ataris).

I'm pleased to report that I've found an uncorrupted, working copy of
Millipede on one of my floppies (unfortunately while packing up all
kinds of stuff to move out of my home to take a new job). I took a
moment to place it onto an MS-DOS floppy (g-- bless Bob Puff and the
Black Box!) and hope to rework at least -that- part of Games003.atr
when I get to the new digs. Unfortunately the new digs will be
temporary so it will be -at least- three-to-six months before I can
even SET UP the Atari-with-BB again -- and then we'll find out if it
survived the move. If it doesn't, I may need to recruit some of you
(esp. with HD interfaces or other path-to-Windows) to image some of my
>1200 floppies... :-) Anybody here in the Central New York area?
I'll be in the Canastota/Cazenovia area unless something changes
drastically.

Chris

And when these threads come up, we all get to learn something we did
not know, like the color of the expansion plugs, the hand written
numbers on the boards, and hardware versions we might have over looked
before.

wrote:

> One thing I've noticed is the large amount of whining going on in these groups about the cost of classic computer items. I don't know what people expect, but I expect that the majority of people have no clue how much old stuff is worth, don't want to be bothered with figuring it out, and definitely don't want to be bothered with selling it in any way more complex than a yard sale. So, I would say 95% (or more) of the classic computers sitting in closes the last 20 years have made their way to the local landfill.

Funny you should say that. I just threw out a *HUGE* number of items in the last two weeks since I am forced by circumstances to relocate a 4-bedroom household into a 2-bedroom apartment. Given more time, I *might* have gone to the trouble of offering various items for sale, but my experience on that point over the last ten years has been firmly that "it's not worth the effort." People mock me for even *having* this stuff, let alone for actually *using* it, heaven forbid *enjoying* it. I know I'm not the only Atari/Amiga/VAX/VMS diehard out here, but it sure seems like it sometimes, and that's discouraging.

> Given that some things like Atari 1200XL and Commodore Plus/4 systems didn't exactly set sales records, I find it amusing (and a little annoying) when people complain about the prices these now rare items fetch on eBay.

Do I even want to *know* what an Atari 800XL or a 1050 disk drive is selling for, these days? :-(I haven't QUITE gotten to the point of throwing those away -- I have a 130 XE with Black Box that I need to make sure I have a backup for, for a while yet -- but the last *I* heard, about eight years ago, was that Atari computers were going for a quarter -- yes, twenty-five CENTS -- at thrift stores. Since then, even the thrift stores, VOA, and Salvation Army have been refusing to take computer items more than just a few years old; the only things they'll take, apparently, are those that can be sold as "relatively modern" Windows PeeCees.

So has that turned around? If so, when did it happen? I don't have the time, myself, to hang around eBay (or here, usually, for that matter) to keep tabs on the industry.

C.

Yes, "for Give," as opposed to "for Sale."

I'm cleaning out my basement and, although I'm keeping most of my
Atari stuff a little bit longer, I do have a bag containing two Atari
joysticks, two Atari paddle controllers, and two third-party paddle
controllers.

Anybody in the Rochester, NY area who wants to come pick them up?

I think you are going to be a substitue teacher.
All those hours you have, probably don't include
enough education courses to qualify as a regular teacher.
I was a sub. You will be interviewed by a school
system administrator. Then you wait for the phone
call at 6AM to what school you are going to. I didn't
get much primary school assignments, the kids put
chalk on my shirt and generally ran amuck, and I didn't
teach them anything, just sort of watched them for the day. You'll have a
choice of joining the union, unless
it is a closed shop. I joined the union.
High school kids behaved some better. Maybe because
I was 6'3" and 220 pounds and a reach of 4' or so.
Good luck with it.

Sorry... but this sounds like a big whine. "No one wants to pay me what my collectibles are worth."

It's you hobbyist collectors that are killing the hobby. No one can get in and see what the nostalgia was all about. You can't put together a working system cause some fanboi has stocked it all away in attic/basement/closet and wants you to pay and extra digit in front of the decimal point for the privilege of having it finally break in your hands. That means people like me will eventually LEAVE the hobby, and you're going to be left with the 5 to 6 of you who have collected everything trying to rip each other off. Eventually you'll die and there will be NO ONE LEFT who knows or cares what these "Commodore's" were.

I've seen CMD HD's and RAMlinks go for more than entire modern PC systems. I'm wondering what kind of moron pays that much for something that can't be fixed.
Maurice STILL has my RAMlink that I sent him in 2004. I'm NEVER

getting that back, so what's the point?

Hell... Maurice was the ultimate Commodore "Collector/Hobbyist". He 'Collected" CMD and killed it. You should worship him. Now your 40MB Hard drive will be worth more than a New Mac Tower, as long as it runs.
As far as supporting the community, Maurice was a nail in the coffin. Any hope that we might be able to keep our stuff running died when he buried CMD in his private collection.

I've been looking for a 1750 for about 4 years now. Without one... it's just not worth my actually keeping my Commodore collection usable.
The MAX I intend to go for a 1750, or expanded 1764 is $75.

512K for $75 is ridiculous. I can get 4GB flash drive for that now.

My collection is shelf junk, and very soon, I will be getting rid of what doesn't hold any real value for me. THE INSIDES!!!!

I can't even find reliable 5.25" floppies any more, so what good are my 1571's? They make great MiniITX project boxes... that's what. Same for my old Commodore 64's and 128's. I'll make a bunch of core2 duo system in old Commodore cases and hide my PC hobby in nostalgia plastic.

You've "collected" me out of the hobby keeping a working C= and eventually it's going to get about 7 vintage machines shelled and tossed.

Any one want SX-64 innards? I bought a semi busted one to turn into my LAN box. Make me an offer, and pay shipping.

You guys wanna horde like dragons, you're going to face the same end. Extinction. Your "horde" will be buried or pilfered in the end.

Supporting your hobby doesn't just mean buying it all up. It means keeping it alive and letting people get the Commodore Experience. When you untighten your grip, you may get some new blood. Otherwise, you'll have the honor of the owning the last C= and people will laugh at you cause their cell phone has better graphics.

Hmm.. Lots of opinions here.. I'll state mine.

First.. simple economics. The value of ANY ITEM is whatever the
highest price somebody is willing to pay for it. If there is only one
person willing to pay $1,000 for a Vic-20, then that is the value of
the Vic-20 at that time.

For me.. I like to collect stuff but only what I personally need..
there are several reasons for that..

1) I don't have the money

2) There is NO POINT in trying to preserve as much hardware as you
can. I know that my children aren't going to ever feel the same way
about Commodore stuff as I do. At some point in time, the stuff is
going to get thrown out, even if it is after I die. At least most of
it. So why fill my house with it today? and of course..

3) Much better to use the space for something else.

Now, I wouldn't mind having an SX-64. That is about the only thing my
collection is missing. But I'm not generally willing to pay the price
to aquire one. If I found one for $50 or less, I might reconsider.
However, that is unlikely as there aren't many left in existence (only
a few thousand were made, right?) and their value keeps going up, not
down. I'd also like to have a flat 128 (I have a 128D, but not a flat
one) but I just keep holding out for one at a flee market or garage
sale or something.

I think you're confusing collectors and speculators. The former aren't
hurting anyone. Their collections are labours of love and you shouldn't
begrudge them their hobby. While you and I might not be willing to pay
such large sums for retro computers, they are. Such is the benefit of a
free market economy. As for your arguement that collecting will result
in the extinction of retro computers, it's the worst kind of hyperbole;
that spurred by sour grapes.

For those on nostalgic kicks, emulation offers an easy and inexpensive
way to relive one's (misspent) youth. The availability of such emulators
is boon to both the collect and the interloper and further weakens your
argument about extinction.

As for speculators, they're a byproduct of the free market economy that
I spoke of earlier. Parasites exist in all ecosystems and there's little
that can be done about them.

I wonder what you'll do when (if) you liquidate your remaining original
hardware. Will you sell it for a pittance to a newcomer or will you sell
it to the highest bidder (who will most likely be a collector or worse,
a speculator)? Yeah, I thought so.

There is a general rule of thumb that says don't draw more then 200 amp
from an Atari. They burn out power supplies as it is so that would
definately be my upper limit w/o switching to a different power supply.

floppies... :-) Anybody here in the Central New York area?

By coincidence Steven Tucker (of APE fame) won an auction from me for
a dead 1200xl - so I was able to get a copy of APE back (I registered
years ago but lost it to moving a couple times/hard drive crashes).
EVENTUALLY, when I'm done going through all my back atari stuff, I'm
keeping at least 2 systems so I'll be able to furthur the archive
cause.

If any of the 1200 disks need to be cracked I can help you out there
as I still remember how to use Omnimon and one of the systems staying
definately has that in it.

Are the 1200 discs duplicates of things that are already archived?

scott

Very true. All I can say is that it pays to make friends with the people who decide what's "obviously worthless." A few years back I got to be pretty chummy with the computer guy at a local thrift store. I let him know that I was interested in old computers/technology and he'd save stuff for me that would normally have gotten recycled. Every few weeks I'd stop by and he'd show me what had come in. Usually it was nothing much, but there were a couple of times where I scored some real gems!

Hi,
Setting lomem in turbobasic locks up:

```
5 REM COPIED FROM MAPPING THE ATARI by Ian Chadwick
10 ? FRE(0):BYTES=192
20 MEMLO=BYTES+PEEK(743)+PEEK(744)*256
30 HYBYTE=INT(MEMLO/256)
40 LOBYTE=MEMLO-(INT(MEMLO/256)*256
50 POKE 743,LOBYTE:POKE 744,HIBYTE
60 POKE 128,LOBYTE:POKE 129,HIBYTE
70 POKE 8,0
80 X=USR(40960)
```

and then I have to reboot. This works with AtariBasic "C"

This is supposed to restart the interpreter, but Turbo BASIC XL does
not reside in the same place as the Atari BASIC. Check the values of
APPMHI ($0e/$0f) and MEMTOP ($02e5/$02e6), that will help you to
understand why jumping to $a000 is not a good idea in Turbo BASIC.

I bought both of mine for about $50 on ebay. no boxes or other stuff, just
a power supply. Both worked, but one had some bad keys on the keyboard. I
replaced the keyboard on that one.

huh..... what makes the 1200xl so desired? Is it because it's the
"largest" with the real keyboard so most comfortable to use?

Keyboard is actually ~the same size. It is one of the best keyboards of course.

It is kind of the '57 Chevy of computers, that is it was an OK computer

when it came out but is really desirable for modifications. For instance
it is fully socketted so upgrades are almost plug and go vs. "Unsolder
the 8 RAM chips" type of stuff.

BUT it does have problems unmodified. The video is the worst of all
the 8 bits and it has a resistor in the SIO 5V supply which makes it
unusable with things like the PR:Connection. The cartridge port is too
small/tight to fit a SDX cart.

The rariety thing probably comes into play too. I mean Atari did not
make a lot of them in the first place and you have hackers competting
with collectors for them.

Something from my box or Early 80's stuff that is taking up space:

http://search.ebay.co.uk/search/search.dll?from=R40&satitle=atari+sales+leaflet

I'm in the UK but ship most places. I have a few '80s magazines listed too.

Jc.

Thank you for the reply, it confirms what I suspected, that the problem
is local to me. I ftp routinely to various sites and this is the only
site that this happens on. Could it be they use a certain port I need to
specify? I will double check my router settings to
see if it is somehow getting filtered, other than that it I guess it would be
Verizon dsl doing something funky. Luckily, I was able to locate all
my favorite software(except for a amateur anti c64 demo-not the one
on the abbuc disks) so I am good to go, but wanted to solve the mystery.

Since I'm on linux I usually use ftp to connect to
ftp sites, I'll cut and paste an example:

```
<deleted>@onyx:~$ ftp mirrors.kernel.org
Connected to mirrors.kernel.org.
220 Welcome to mirrors.kernel.org.
Name (mirrors.kernel.org:bingham): anonymous
331 Please specify the password.
Password:
230-            Welcome to the mirror archives of the
230-                    LINUX KERNEL ARCHIVES
230-                      mirrors.kernel.org
230-
230-This site contains mirrors of other archives.  If you are looking for
230-   the Linux Kernel Archives, please go to ftp.kernel.org instead.
230-
<snip>
```

When I do it for spudster it just hangs:

```
<deleted>@onyx:~$ ftp ftp.spudster.org
```

So thats when I tried pinging(I'll do successful example first):

```
<deleted>@onyx:~$ ping mirrors.kernel.org
PING mirrors.kernel.org (204.152.191.39): 56 data bytes
64 bytes from 204.152.191.39: icmp_seq=0 ttl=49 time=101.824 ms

I've been looking for some time for an Axlon compatible memory upgrade for
my 800.  As I haven't found one, I have been looking into a home made
solution instead.  I have seen plans for a 256K board made from an old 16K
800 board, but have seen it stated that this board is not 100% Axlon
compatible unless modified.

Has anyone built one of these boards, and more importantly, have the
information on how to make it 100% Axlon compatible?

Any info would be appreciated.

-Jason

I just posted the updated versions of these two programs on my website.

http://jeffersonsauctioneering.com/atari/

The MyIDE Image Manager has had some significant changes, at least under the hood. I've moved the image table to the last image slot of the hard drive and taken the descriptions out of the image table so that I only use the Mr. Atari descriptions. This makes the image table smaller, but it does increase the time taken to search or scroll a screen at a time through the image list. Since there is more disk seeking going on, I sped up the screen scrolling considerably in this version.

I'm still undecided whether or not only using the Mr.Atari Image Manager descriptions was a good idea or not. I dislike the speed hit searching and sorting takes, but I suppose it makes things easier overall.

Anyway, let me know what you think. Here's the complete list of what's new:

version 4.0 (02/20/2007):

- moved image table to last image slot on drive (not compatible with myideman 3.3)
- created utility to convert image table from version 3.3 to version 4.0
- removed descriptions from image table, uses only Mr.Atari description
- removed ability to number disks by pressing 1-9 (useless feature)
- faster screen scrolling!
- cosmetic changes in utility menu, removed Sync START description option
- fixed sort function to ignore case
- can minimize screen while sorting, to help speed up sort

- better progress indication in sort screen

PS. I will be releasing the source code soon, on the website, but just want
to clean it up a little first and add some comments here and there.

I found this in my mess (literally) of documentation.

AXLON RAMDISK COMPATIBLE MODIFICATION FOR 800+ 256K DAVID BYRD For complete compatibility with any software written for the AXLON system memory expansion, the modifications shown in FIG. 8 must be made to the ROM board.THESE ARE NOT REQUIRED for non-AXLON mode of operation, but if you have SYNFILE, SYNCALC, or any other software that supports the AXLON system (including the AXLONRAMDOS) then these additions areneeded. (the SYN- programs will recognize all 288k!!) Obtain a 74LS00 and a 74LS30 chip. remove the jumper (if you installed it in the regular mod) from Z401pin 7 to pin 20 on the edge card.Mount the new chips "feet up" deadbug style and do the wiring shown in FIG. 8 carefully! Note that A402 and Z401 are already part of the ROM board.Good luck! All Art and this file Supplied by the CHAOS BBS [phone number withheld]

The thing I find funny, is Jay Miner, the guy who invented the AMIGA, is
the same Jay Miner that invented the Atari 400/800 line.

Jack Tramiel and his people who was responsible for the C-64 are the
same ones who created the Atari ST. If you were a *real* fan of the
earlier machine, you should have switched companies, and stayed with the
people who designed your beloved machine. What would have been funny,
is if Commodore did not sneak in at the 11th hour, and steal Amiga from
under Atari's nose, and it would have been the Atari Amiga and the
Commodore ST.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy

A Commodore ST would probably have used a 16-bit 6502 variant and =
probably would have helped MOS Tech stay relevant much longer than it =
did. If Commodore had been capable of keeping it's talent around a =
Commodore ST would have been an absolutely awesome machine. But, Jack =
and Irving had a knack of running everyone off until online Irving was =
left.

Everyone call.
telnet://stguild-bbs.dydns.org/

I want to get a 8-bit section if I can get enought 8-bit callers. 5 Gigs of
ST files, and want to add 8-bit. Lets get it rolling.

I've been well. Things have been as busy as ever, and I'm not doing
Atari-related stuff as often as I used to, but I do still try to get
into it every now and then.

My kids have actually gotten interested in playing Atari games, so
I'll probably be spending more time in this area again for a while.

- Trevor

Hi

What happened to the excelent Clarence Dyson site with the Atari mods?

These URLs no longer work:

http://www.geocities.com/atari
http://www.wolfpup.net/atari/atari.html

There's just the Archive.org backup:

http://web.archive.org/web/20050209151624/http://www.geocities.com/atarimods/

Will this site be back online again?

Regards

Somewhere lost in time a guy added a 256k static RAM to an 800 memory
board. I looked for it but couldn't find it. Looked like a really neat
hack since I am used to seeing rows of chips and support chips on an 800
RAM board. This just had the static RAM and a support chip or two so it
looked kind of lonely. I can't remember how he banked it but I thought
he did something tricky like Axlon compatibility and allowed it to be
the only memory board in the computer.

I'm sorry but I don't have a server where I can host the files but I
will be happy to email them to anyone who requests them. (Check your
inbox!)

The .PICs turned out to be Koala pictures, btw. I used Atari800win
plus to make screen captures (.PNG). I put them with the other files
for convenience.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at
http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received
Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify
Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

Duke Nukem has just been released for ATARI 800.

It will be sold on 643 floppy disks or on cartridge.

A cassette version will not be released.

Actually I think Duke Nukem would be possible on 1 disk. After all it is
just a simple platform game from 1991.

Short story goes long. Trust me, it does wind around eventually.

My family has been pestering me about my old high school in particular. Seems it is now the lowest rated school in the district. Achieved national recognition because of a couple of stories: With the 'No Child Left Behind' rule pretty much any kid that wants to get out can transfer. Of course the only kid who wanted to transfer was a top student so the principal wouldn't let him leave because it would drop the school even farther down academically. The other story was about a student that was here illegally and had a Coca Cola scholarship to Harvard or some such withdrawn.

So my family says ~Seeing as how you are sorta retired/not doing much, why don't you get your teaching credential and see what you can do? Yeah right! I am the least likely candidate for the role of Jesus <pronounced Heysoos> cleansing the temple you have ever seen.

So I sign up for my CBEST. I figure I can just flunk that sucker and any talk of me being a teacher will be squashed like a pancake. Naturally I lose my drivers licence the week before the test so I goes looking for my passport, you need photo ID. Turns out the little woman apparently through away my passport. She throws away everything important and keeps bits of string and feathers. Threw away my income tax returns two years running when I took a break from working on them at my desk. Tossed them in the fireplace and burned them she did, not joking but I wish I was. Isn't creeping senility grand?

w/o photo ID it was a problem taking my CBEST. I explain my problem, that is the state takes 6 weeks to replace your drivers licence and after being shuttled around to the administration building I am told. "We just need any photo of you to allow you to take the test. Even a Cosco card would be OK if you can leave it with us." So I says, "How about if I just go to Walgreen's and buy a Poloroid camera?" and they give me the OK. I get back, they take a snap shot, I fill out some forms, they say I can take the test. I am an hour late for a 3 hour test but I have kind of a cavaleer 'tude so I breeze through it in about an hour.

My drivers licence comes, I fill out more paper work, notory public cosigns the forms, et cetera. Few weeks pass and suprise of suprises I pass the CBEST! Not exactly flying colors, I thought I didn't miss any on the math but only got 66 out of 80! I must of gotten off a row on the answer sheet, but still good enough to pass.

So now it becomes time to send in my credential package. They expect transcripts from every college I attended. They don't have enough room on the forms for the number of colleges I went to. Just a bachelor's from St. Mary's College but I also did stuff like took a C programming class at West Valley College, a local JC, to the tune of ~200 units in total.

But heck, for me no problemo. I keep transcripts of all my college course work going back to 1968. Only transcripts that weren't in my double secret probation hiding location were my St. Mary's ones. You can see where this is going: Little woman found them and tossed them. Must be some real odd wiring going on in that brain that says "These look important so I must do something important like sacrifice them to the fire gods."

She's starting to feel just a little bit self concious about throwing away and/or burning my important papers so she actually helps me look for the transcripts. Guess what she pulls out? My old Cybiko!

For those of you that aren't familiar with Cybiko, it was a 11 mHz H8 hand held computer. The H8 is cousin to the 68000 series of micros so you pretty much have the processing power of an ST in your hand. There were several serious faults with the thing, like small low rez 160x100 screen in 4 shades of gray, tiny keyboard. What it had going in its favor was built in radio networking for chat, serial port, free C cross development package.

I start trying to revive the thing. I have to pull the NiMH cells and clean up the mess they leaked. I find a charger that is about the right size and voltage and sure enough, the thing leaps to life. Then our story takes another twist. I have what is probably the worlds oldest and fattest weimeriener. He's 15 years old and last time I took him to the vet he weighed just over 112 lbs. Being 15 years old he is kind of hard of hearing and can't see. He plows into the Cybiko/recharger cable and pulls it off the table and onto the ground. He's not quite as quick witted as he used to be so he just keeps plowing forward with me yelling at him to stop until the Cybiko disintegrates. Broke the damn mother board. I was thinking maybe just hot wire it.

I start looking on the web for Cybiko and predictably enough, defunct. Not only that, but there are few and far between fan sites. I do find an archive where I can get some of the Cybiko software but I know I will need the RS232 cable to port anything over. I do my eBay thing and like everything else that has been relegated to the junk heap, there is tons of things Cybiko there.

I get a model like my dog trashed. I buy a 1 meg memory expansion but heck, I don't know if it is for the model I just bought or the latest greatest Cybiko Extreme with 18 mHz processor and USB interface so I had better get one of those too. There is a MP3 player available but only in England so I pass. The good news is the price on this stuff has dropped to less then $10. The bad news is most of the sellers seem to inflate

the shipping on a 1/3 lb device the size of a pack of cigarettes to $25.

Anyway I am looking forward to hacking the device. I am thinking since there is software for one Cybiko to be hooked to an IBM to work as a radio network file server there ought to be something I can do with my Atari. I don't think they have enough pins coming out of the RS232 connector to do a SIO2PC interface but I should be able to get one to radio modem type file access on the IBM.

Rick

Rick, I don't understand what the Cybiko has to do
with your public school teacher's license.
I understand playing with old hand helds. I just
put a HP41 emulator on my Palm Tungsten E.
And I put new batteries in my HP41C, just to
keep it going. The HP41C probably pre-dates
your Cybiko.
So, you take the test, pass it, now are you ready
to start teaching? Teach what? I substitued in
the Cleveland Public School system (Ohio), but
gave it up. I couldn't manage getting the kids
to behave moderately acceptably, and didn't follow
the regular teacher's class plan.

Does anyone out there have one lying around in a basement, under a bed, or hiding behind clothes in a closet or someplace else? Also, can you please sell it to me for "FAIR" price?

I have seen many go on eBay for the past 3 years and ALL ARE OVERBIDDED ON! I am going to use it for development and designs so I really can't pay $200.00 for a mere 8-Bit Computer Keyboard.

Please let me know if you have one for sale before throwing it up on than DAMN EBAY!

Thanks a lot!

How hard would it be (or is it possible) to convert an 800xl to a 1200
xl?

Bill H

That is bad news. I've gotten hard to find stuff
from the UK, only last month. I have a search
for certain items, and the UK was included in
my search results. I'm sure it was a www.ebay.uk or something like that.

I don't have the Happy 1050 any more, but I believe the software came with
the upgrade. Something like Happy 7.1 software.

My 800XL is undegoing surgery right now so keep your fingers crossed, I

will inform you how it went on Friday :)

They are no longer including UK listings as standard unless the user
selects Worldwide from the search options. This isn't done by default
and nobody would generally bother or know anything about it.

Here's a link to eBay's blurb about it:

Hi all...

A couple of years ago I found-and-downloaded twenty or so "megadisk" images, named Games001.atr, Games002.atr, ... etc. Since then, my copy of Games003.atr seems to have gotten corrupted, and Games004.atr and Games007.atr have gone missing entirely. Worse, a Google search fails to find a source for these images anywhere on the Web.

Anybody got 'em and could send 'em? Please e-mail me even if you also post here, as my news feed is remarkably unreliable, as also is my ability to contact Google Groups at the present time.

Thanks in advance,

Chris Chiesa

Phones are old tech. It really is easier for me to call BBS's on my Atari 800 with ETHERNET than phone. :) Strange eh?

Well, anyway, I haven't given up hope that as I try to nail down a good BBS list of ALL United States BBS's that I will find an Atari BBS still off the network.

I look forward to bring them back into the Atari fold. :D

Oh the modem music. How did that work again? I haven't heard of that feature
on any other BBS. Would it play through the speakers of a conventional hayes
modem?

Thanks for hosting the Atari list Trevor, and Ronald, thanks for hosting Darkforces, perhaps the best Atari BBS I've been on since I got back into Atari in 1999. Of course then I was calling long distnace. ;)

I had a small program, activated by the caller from the main menu, that
would play small music files by using the callers modem's speaker. The
modem did have to have a speaker to work though. I believe I had something
like 8 or 10 songs setup. I don't have that menu option listed anymore
(doesn't work with telnet), but I've still got the software itself.

There are three such compilations I'm aware of.
I think you got the mega image from the CTH
archive .atrs. Then there's the Yogi compilation
mega images. And then there's the Holmes
mega images, some for the ST DI images,
and I think Holmes also has the Yogi images.
The Holme's archive is on the net. CTH arcive
used to be at ftp.spudster.org, but I think it is gone.

Hi

I'm happy to announce that my 800XL is now in full working order,
replacing memory chips solved the problem. Total cost of repair:

16 CZK (0.8 USD) for 8x Tesla MHB4164
24 CZK (1.2 USD) for 8 sockets
1 hour of my friends work.

Thanks for all your hints, comments and advices, they were very helpful!

Regards
Vit Herman

  That would be worth a long distance call just to try that once.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
net.micro.atari8 - created Feb 1986
net.micro.atari - created Nov 1982
net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

Look at that, "Transylvania" for the Atari ST. I was not aware that game title was released for the ST. According to Wikipedia there were three games in the Transylvania series.

I still like adventure games with text input/output and static graphics images.

Hallo Chris,

do you mean the f.i.
Games001:
- Alley Cat
- Archon I+2
- Avalanche
- Baja Buggies
...

Games 002:
- Blueprint
- Adventure Writer
- Crash Dive
- Death Star
....

?

I`ve them, so if these file are correct, i'll sent them to you.

Helge

I recall back in 1983 / 84 an Atari store in San Diego that used to
sell software for the Atari from an outfit called Brown Bag software.
The software was on tape or disk with a simple printed instructions in
a stapled brown lunch bag. Was this something locally or did others
ever recall seeing this?

Bill H

Your best chance of getting 3" disks is here in the UK. A few long-forgotton
Amstrad machines used them (the Spectrum +3, Amstrad CPC 664, Amstrad CPC
6128, Amstrad PCW 9512). A quick search on eBay (UK) shows quite a few games
for these old things going on 3" disks for as little as $1. Try item numbers
330082337935, or 120096665304 for 10 blanks for about $15.

Very interesting.

I've heard from several people since I first posted; thank you all!
Helge, you are correct, the disks you describe are the first two in
the series I am talking about. Russg, I'm not sure WHERE I originally
got 'em.

Steven Tucker, "Charlie," Stephen Shepard, and Vidar Olavesen all e-
mailed me copies of the specific disks (by number) I originally

mentioned. I haven't looked at anything but Games003.atr, thus far -- but guess what? EVERYBODY's copy of Games003.atr appears to be corrupted just like the one I started with! Apparently the original megadisk image file we all downloaded from a common source 'way back when, was already corrupt when we obtained it! :-(

But don't take MY word for it; maybe something's wrong with my emulator, my DOS image, etc. Try it yourselves-- PLEASE! I am running Atari800Win PLus 4.0. I attach a MyDOS 4.53 disk image as drive 1, and Games003.atr as drive 2, then cold-boot the emulated Atari with Basic disabled. At the DOS menu, I (L)oad "D2:MILLIPED.E" -- and instead of the game "Millipede," I am immediately returned to the DOS menu with an "Error 136" message.

Analysis reveals that the third or fourth data sector of the file is corrupted, in such a way that the "next sector" field contains 0000, terminating the file prematurely. (Sectors beyond the bad one appear to be okay and properly "chained," such that ONLY this single sector is bad.)

A full-on analysis of the entire Games003.atr image indicates that MILLIPED.E is _not_ the only corrupted file on this megadisk. :-(

Further bulletins as I refine my analyzer program.

Unfortunately I am going to be moving, so may not have time to get into this in any greater detail for anywhere from a week to several months, if I don't get to it TONIGHT... and it's past midnight NOW. :-P

But I digress. I also heard from "scott" <seymour-shabow@excite.com>, who identifies himself as the creator of these megadisks. Scott, I have been on vacation all week with barely enough Internet connectivity to post here, and NOT enough to e-mail you directly. I would be EXTREMELY interested in hearing whether YOUR ORIGINAL copy of, say, Games003.atr has the problems I see in all copies to date -- and if so, whether you could conceivably re-create and reissue it. I plan to check all the other images in the series, too, as time permits.

Further bulletins as events warrant, and thanks to all who will undoubtedly be pricking up their ears and digging deeper into this!

C.

Okay, I was able to pound the last few nails into the lid of my
megadisk-image analyzer (it's a Perl script if anyone cares), and
check _all_ of the Games###.atr images I have.

The good news is that there are only two corrupted images out of the
twenty (Games001.atr through Games020.atr) I have; the grand total is
three corrupted files:

      Games003.atr:
           MILLIPED.E - sector 951 links to sector 5269
           PREXOR.   - sector 951 links to sector 5269

           (Note that the bad sector is the SAME sector in both files
-- there are subtler problems here than just one bad sector...)

      Games008.atr:
           ANTEATER. - sector 3550 links to sector 42441

I'll be interested to see if others of you can reproduce these
results, using whatever MyDOS-disk-analysis tools you have. Scott, we
definitely need a rebuild of images 3 and 8! (And if there are disks
beyond #20, I'd love to receive them so I can check them too!)

Chris

FamilyNet International Newsgate

A long time & stable Dallas BBS has offered to provide a "Favorites page" for the Atari BBs users. Basically I provided a up to date BBS list of the active Atari sites out there, and he created a place you can go to, bring up an Atari telnet menu, and go to an Atari BBS. :)

Ever been curious to see the online world of Atari computers? Come check out the Prison Board BBS:

972-329-0781 (this number good for people want to try out Atari modems,
               and dialup means.)
216.62.20.217 (This IP number is great for Lantronix users, and has not
               changed for a considerable time.)

Never has the online Atari world been so easy to access from your Atari computer. Simply call up the above system, get to the main menu, X for the internet menu, and then A for the Atari menu. From there, it is simply a matter of hitting 1 through 9 for the Atari BBS's. Atari BBS's in many cases run on real Atari computers like the one you're calling with.

And the Prison board makes a great E-mail service too. :)

Let me know here if you have any questions, and many thanks to the Prison Board BBS for this awesome service.

Hmmmm I'll check those when I get home from work today - I can see why
I never noticed if they were bad because all 3 are games I never
play. I'll have to rediscover how I made those images but pretty sure
you can just take an image file, "format" it with mydos, and then copy
the files up to it. It's possible also that the sector links are just
bad and can be fixed. Tell you for sure that all the images were
created "fresh" so the sector links SHOULD be sequential. It's been
ten years or so since they were created so memory is a bit hazy on

this.

I think they go to #22 or 23.... I almost never play anything over
mega #9 anyway. The later disks had more of the larger sector count
programs on them and it was getting harder to maximize the space. The
earlier disks have more of the stuff I liked to play hence their
layout.

I didn't think they would catch on the way they did - at the time I
just wanted to set up an old PC with APE/SIO2PC without a hard drive
and with 2 floppies, that's why I picked the size they are, so would
fit on a PC hi density floppy.

I wonder what it sold for. I had one just like that, but sold it about 10 years ago. I think I got $15 for it :) I've still got one or two of the floppies somewhere. I should have kept it; It was a VERY well engineered piece of hardware. Too bad it was little more than a paperweight.

Hello Everybody,
I found something interesting:
http://homecomputer.pl/tommark/sprzet/202

Does any one see this Atari 520 with strange square keyboard?
Anybody know something and can write about it?
This is my friend's computer and he can't find any information.
Best regards,
Grzegorz

They go to games 022, which is not even full. my copies of 3 and 8
have the same corruptions - odd as I remember testing them extensively
when I made them (on a real atari). Anteater I have as a
standalone .atr file (which will need conversion back) I'll have to
look for the other files, but I can tell you that I got ALL of the
files from someone on the internet way back when and merely put them
on the mega images.

Email me and I'll send you the 21 and 22 mega disks. I'll have to re-
figure out how I made the images in the first place since making a
"big disk" in mydos did squat.... I think there was a program that did
it would have to delve into it. Hell, I have to even find my

registered copy of Ape to try and duplicate anything off my real
ataris.... (and my sio2pc cable.....)

I probably have some of the files on disks from way back when but
would have to check.

It depends if you count type in games from the magazines.
Does anyone else remember 'Medieval Combat' from creative computing. My
brother and I spent a *month* typing that sucker in and debugging it,
and it used to take around half an hour to load from tape.

But it was worth it!

No binaries in this group and I don't have other newsgroup access any
longer other than google anyway. The program I used someone else
wrote and is probably in the umich archive.

There's nothing in those disks including the utilties that isn't
available in other formats if you search around. There are still tons
of sites that host it.

Original message follows.
I don't know if you mean do I send copies of
my CDs for Pay. I don't have my archives on
the internet, but they are pretty much available.
There was another thread that mentions the
Holmes and CTH archives whereabouts.
It's not that I have anything agianst making copies
of my CDs, I'm just too lazy I guess, there seems
to be others who will mail out Holme's archive
for instance. And Tom Hunt charged, well,
$50 for his archives mailed to me, so I guess
there's a little reluctance, even tho Tom probably
wouldn't mail them today, but, ftp.spudster.org
has the CTH archive. I'm pretty sure the spudster
site has updated the CTH archive with new files.
But I ramble.
Regards

there was a company called white bag software. i used to carry their
stuff. i still might have some somewhere stored for posterity. the
games came in a white bag, sometimes the bag was shrink wrapped,
sometimes not. some had hanger hooks on the bags, some not.
thanks,
lance

    Nada... and I don't see the picture here. Was this some after market
    external keyboard? A lot of us ST users were craving for a external
    keyboard solution after a while. :)

I said "almost all", not all :) However, any other ideas what may cause
this problem? I would be glad to hear them, because I would like to
avoid any soldering if possible.

Thanks for your answer
Vit Herman

Hi

I tried to reply in mail, but it has bounced back off, so I send it here:

I greatly appreciate your offer, however - where are you from? I'm from

Czech Republic, so postage fees might be nasty when sending this for
example overseas.

Anyway, if we would be going to do such a deal - will sending the
mainboard alone be ok? Whole computer is quite heavy so postage will be
higher. If so, should I buy those chips and send them to you, or will
you get them and I'll pay them for you?

Thanks for your answer
Vit Herman

Just the motherboard would be fine, in fact preferred.

If it isn't the RAM (which i'm sure it is), I can still fix the problem.

Thomas

I agree that if the RAM were 100% failed in each chip there would be no self-test screen or anything. However, it sounds like several banks must be at least intermittently working. The clues that I am looking at are:

1) They are MT type RAM chips - these are KNOWN for failure
2) The RAM test DOES indicate bad RAM.
3) Obviously the main IC's are functioning - OS, CPU, GTIA, MMU, ETC. or he wouldn't get the self test.
4) They are not socketed which means they are OEM.

Ok, I'll se if I can get the chips and if none of my friends experienced
in soldering will be able to do it, I'll contact you for sure.

Thanks again

Vit Herman

I have a general method of repairing, which is
replace chips with known good ones, which you can't do probably no second
800XL.
I don't deny docrotcod's idea that one or more RAM may be bad. But......
I'm thinking the
BASIC ROM. The OS is trying to boot and it goes to the self test, as if you
held down OPTION to start. If the BASIC ROM is socketed, that would be a
good one to try with a good one, I think. You really don't want to be
de-soldering a bunch of things if you can avoid it. Uhm... Here's an
idea.... Get a cartridge, any cartridge, and see if that will boot properly.
I think that would bypass the BASIC ROM.

Hi

I have a cartridge (Turbo 2000 loader) but pluging it in changes
nothing. However this doesn't prove anything as I'm not sure about way
to "activate" the cartridge at boot time, because I have no docs for it.

In fact, I have another working 800XL, but I'm not going to cripple it
to repair another one - no win, just lots of work. I saw some guy's page
on the net, where he described the same problem I have and changing the
RAM solved it for him. In fact, I'm pretty much sure his memory test
showed errors in the same places as mine does, but I can't check this
because I don't have my Atari here.

Normally there is nothing to 'activate' on a cartridge. You just plug it in
and turn the Atari on. I live in Oklahoma, US. I'd be happy to fix this
for you if you like. Even if it isn't the RAM, i'll be able to further
diagnose it and fix it for you.

People can vouch for me on here if you need personal references.

Thomas

P.S. I'm just trying to help you fix your Atari, I hate seeing dead Atari's.
It's kind of like my mission ;)

I think that the cart you have is good enough to test my theory. It sounds like a DOS cartridge. Hmm.
A DOS cartridge may try to load BASIC if OPTION isn't pressed. How about holding OPTION and boot the cartridge. If it is a DOS cart, it might come up with a menu if OPTION is held down at boot time. Jindroush Kubec, from the Czech Republic, but no longer accepts and communication about Atari. There are some very knowledgable people in Germany at the ABBUC group. Some read here in csa8. You might be better seeing if someone from ABBUC could help.
It is www.abbuc.de they have enthusiasts from all over the world and may be able to put you in touch with someone local to you.

Turbo 2000 loader is a tape drive loader for
fast tape loading. I think it would not necessarily
disable the built in BASIC ROM. Maybe try
holding START with the cart in and turning on.
It might give a beep sound. The cart is for
Czech tape drives, modified for use with the Atari.
I still recommend ABBUC. Andreas Magenheimer is a member there.

Ok I didn't know in your prior post if you meant you had adjusted it or ohmed it out. I had an XE with no color once and one of the resistors in the video circuit was blocking the color from reaching the monitor. You might check the resistors in the color circuit and see if they are in spec.

Not necessarely true that the RAM is bad. I also had a broken 800XL and
the RAM decoder was bad, not the RAM. That's additional logic that
decodes the addresses from the CPU and drives the RAM.

> My question therefore is: The memory chips in my 800XL are labeled MT
> 4264-15 - which spare should I use? I'm able to get some 4164 for a
> bargain price - will they do? Any suggestions on other suitable chips?

As long as the memory organization is the same, IIRC 64Kx1Bit, and the
pinout is identical (likely) and they are 150ns or faster, then this
shouldn`t be a problem.

> Another question - is their timing (I guess the -15 means 150ns)
> critical or is it possible to replace them with chips with another timing?

It's possible to replace them with faster chips.

> I guess I'll leave the soldering to somebody more skilled, but anyway -
> is soldering in some sockets and putting the new chips into sockets a
> good or bad idea?

Sockets are a good idea, you cannot burn the chips when replacing them.
Just don't try to de-solder the old chips. Use a wire-cutter to cut all
pins off, then solder the pins out. Otherwise, you likely damage the board.

> Is there anything other I should check prior to replacing the ram chips?

Is there anything else socketed? The CPU could be bad (address lines,
power), ANTIC could be bad (DMA logic faulty). Yes, I know, it sounds
that then the computer shouldn't power on, but that's not so easy,
depending on what exactly is broken.

Could be even a faulty basic ROM that doesn't disable itself on the bus
and thus confuses the timing only for RAM. On my bad 800XL, I had the
symtom that the RAM test failed often, not always. The Basic ROM was bad
(really!), and the RAM decoder was bad. The RAM was fine.

So long,
     Thomas

I understand, but sending it overseas and back would cost more than
buying another working Atari here. However, one of my friends kindly
agreed to do the ram exchange for me, so I will let him do it. There's
also chance he will keep the Atari once it is working, because we both
collect those old machines, and he has one Didaktik Gama to spare and I
have two Atari - so we may do some kind of an exchange.

> People can vouch for me on here if you need personal references.

I trust you, all right :))

> Thomas
>
>
> P.S. I'm just trying to help you fix your Atari, I hate seeing dead Atari's.
> It's kind of like my mission ;)

I understand, it's just that shiping overseas is so expensive. However,
if my friend will be unable to fix it, I would consider sending it to you :)

Thanks a lot for your help.

I know what Turbo 2000 is :)) As I said, my friend will try to fix it,
he has done such things before and has all the necesary equipment, so I
he'll be able to do it. If he fails, I'll look for somebody else :)

Anyway, thanks for all the information.

Vit Herman

I hope that's not the case because I don't know where to get spare one :)

> As long as the memory organization is the same, IIRC 64Kx1Bit, and the

The guy who offers them says he doesn't know their timing but says they
should be OK for 8bit computers. I will check the details today. But he
offers them for 2 CZK each (aprox. 10 cents each) so if they won;t work,
no damage done - at least no economical damage :)

> Sockets are a good idea, you cannot burn the chips when replacing them.

Ok, will do :)

I can't check - however the machine goes to memory test right upon
power-up and it the memory test fails - always (I had tried at least 10
times).

Thanks for information and advice
Vit Herman

While I agree with what everyone says, I think we're thinking it to death.
Sockets are not a bad idea. Start simple and swap the RAM.

Thomas

Vit,

Thomas (docrotcod) just replaced bad RAM in my 130XE... it had almost
identical symptoms to your 800XL. The sockets are nice in that if a RAM
chip ever goes bad again, its a very easy fix. From the time I sent him my
130XE, I had it back working in 9 days. Being overseas, I know shipping is
an issue, but Thomas did first class work very quickly.

-Jason

I always had a problem telling if a resistor or
capacitor was open or shorted. If you put the
VOM accross the resistor, it will go backwards
thru the system. You don't want to go clipping
resistors to check them..?

Thanks for the kind words Jason. It was a pleasure working with you on the
130XE. I hope it works for years to come.

Thomas

Does anyone out there have a disk image of them 80 column versions of LJK
Data Perfect and/or Letter Perfect? These were versions designed to work
with the Bit-3 80 column board for the 800.

If you do, please ping me.

Thanks.

Jason Harmon

Atari BBS List 03/07/2007

http://www.atariplanet.info/ATARIBBS.TXT

Maintained by Trevor Holyoak <trevor@holyoak.com> and Greg Goodwin <Greg.Goodwin@familynet-international.net>

(Greg single-handedly called and verified that all the dial-up BBSs in

the United States and Canada are
now either down or wrong numbers. He also came up with the new list of
systems accessible on the Internet
that are dedicated to the Atari 8-bit. Thanks for all the work, Greg!)

```

*****************************
*  Atari 8bit Support BBSs   *
*       (dial-up list)       *
*                            *
*****************************

(The following list is of boards that are located in the Eastern
Hemisphere
and have not been verified in many years. It is included for the
benefit of
those that live there in case they are still operational.)

Please keep me informed with updates to the list and I'll post
revisions
as necessary.  In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
  "Type" indicates the type of hardware used to run the board.
  "Status" is whether the board was up or not the last time it was
checked.
  "Status Date" tells you when the entry was last updated.
  --
  There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry
has been updated since the last version of this list.

I'd like to thank him as well - I try to maintain a similiar list on
DarkForce, and a random logoff screen that lists other (still) working
BBss that user may be interested in contacting.

Oh for the record, DarkForce is run on a Mega ST2, upgraded to 4 megs, and
with a 16 mhz Adspeed accelerator, 4 gig HD, and a CDRW...and all Atari ST
software - no emulation. :)

Ok So I am going though all my 8-bit stuff. I was wondering, what
hardware/software do I need to copy protected 8-bit disks, and what great
utilities out there are a must have?

Also anyone have the Holmes CD's then can send me a copy of upload them to

me somehow?

Great Work Trevor. You should make a WIKI list also on WIKI for the bbs
systems.

There's lots of ways to copy protected commercial
A8 disks. The most challenging, to use a disassembler and modify the
protection code on the disk. The simplest, as you ask, download the already
protection removed disk images someplace, like Holmes disks.
But I would recommend the PRO system from www.atarimax.com it will make a
bootable image you can use with an APE/PRO interface. I haven't used it,
but I think it would give you 100% compatible results, and would probably
be legal, as you are making a backup of software you own.

               Welcome to the comp.sys.atari.8bit newsgroup!

                    Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,

130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

```
    Former (before 1987) Usenet newsgroups for Atari computer discussion:
      net.micro.atari8 - created Feb 1986
      net.micro.atari  - created Nov 1982
      net.micro        - created Jan 1982
```

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

```
  alt.binaries.comp.atari8bit
  Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
  Attacking and defending Atari computers.

  comp.sys.atari.announce
  Atari related hard/software announcements. (Moderated).
  An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
  http://www.atariarchives.org/csaa/  Moderator: Kevin Savetz

  comp.sys.atari.programmer
  Programming on the Atari computer.

I had always used the Happy enhanced 1050 and its software for this. I was
able to copy most protected disks at the time.

There was also a software-only package I used 20-something years ago, called
Chipmunk I believe, that had patches for many protected packages and created
non-protected disks from them.

I've listed some Atari Computer reference books on eBay. All starting bids
at or below $.99 no reserve, just trying to get the books in the hands of
someone who can use them. Will combine items to save on shipping.

COMPUTE!'s First, Second, and Third Book of Atari
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091954110
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091954974
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091956382

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091957772

COMPUTE!'s First Book of Atari Graphics

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091959944
Atari BASIC, A Self-Teaching Guide

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091961141
Your Atari Computer- a guide to 400/800 personal computers

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091964296
Atari Sound and Graphics- A Self-Teaching Guide

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091966262
Atari 400/800 Technical Reference Notes C016555. Not sure what to make of these. It's about 500 pages of what look to be ROM listings, schematics, and pinouts. Some pages marked "Reproduction Prohibited without Publication Dept. Approval." PM me if you want more info/pics. I'd imagine this would be pretty useful to someone on these boards, if the info isn't easily available online.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=280091966841
Atari BASIC Reference Manual with 400 or

  I was remembering the days when I got to play around with my cousin's
Atari 800 XL computer for a week or two. It had loads and loads of classic
games on cartridges and disks. It was a lot of fun to mess with.

  Here's my question. Now that backup ROM images are easily available on the net, has anyone ever made something like a cartridge that you can load gobs of ROM images to some sort of cartridge based reader?

  I don't know exactly what it would be - same size as a cartridge, but you can insert an SD card into it, or something like that, and use it for storage?

Hi,

U can check with www.atarimax.com and also www.mr-atari.com for cartridge
SDcard readers.

Yes, I suspect the original poster is talking about
commercial software published and copyrighted
in the US. US copyright law allows making a backup of copyrighted 'media'
you own.
Even tho the publishers didn't want it copied
successfully, it is legal to make a copy.
This made/makes sense as almost all media,
tapes, floppy disks, CDs, DVDs are subject
to accidental or time related failure.
Today, most software is 'licensed' in order to
get around the copyright backup provision I guess.
Even though, I believe, US copyright law permits
making a backup of music/software, the new
Digital Millenium Copyright act makes it illegal
to even discuss ways to circumvent copy protection.
I'm sure the DRM features of Windows, OS X
are designed to limit and/or prohibit making
backups, say, to be able to play the same tune
on more than one iPod/ZUNE/MP3.
The publishers and Microsoft in particular are
more and more limiting what someone can do
with the device they purchase, ie. it is the publishers
who own the computer/music player you use,
and they have control over what you can do, when
you can do it, where you can do it, ie. they own
your device. Similar to the property taxes on
real estate, in the time it takes to pay off a loan
on real estate, you've paid the cost of the property
in real estate taxes, so it is the municipality that
actually owns the property, and you just rent it.

Are you talking about a particular wiki (such as wikipedia), or
creating a new one for this purpose?

Thanks,
Trevor

Greg has informed me that after sending me the current changes he was
told that the remaining dial-ups left on the list are also no longer
functional. It's kind of sad to think that there are no dial-up
systems left anywhere in the world.

- Trevor

That is a bummer. When I resurrected my BBS, I thought about doing
dial-up, but the advantages of Telnet were just too many. I still do miss
that warbling sound, and the ability (on DarkForce at least) of playing
music through your modems speaker (if it was so equipped). :)

I've posted onto Jaguar Sector II (http://jaysmith2000.ipbhost.com/) and
Atari Age (http://www.atariage.com/) info about auctions being conducted by
B&C (www.myatari.com) on behalf of John Skruch.

Here's a link to the Atari Age site posting about the auctions where you can
find links for more info.
http://www.atariage.com/forums/index.php?showtopic=103426

Enjoy.
Glenn

Hello All,

I have new batches of Atari 800/XL/XE to SCART or RCA cables. These are
currently being sold on eBay at a fixed price. Link is:

UK/Europe: http://search.ebay.co.uk/_W0QQsassZdeangarraghty

US/Canada: http://search.ebay.com/_W0QQsassZdeangarraghty

Sorry I'm having to promote these on here, but eBay's crazy decision to stop listing UK auctions on eBay.com has meant that nobody outside of the UK ever gets to see the listings.

Dean Garraghty

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE Game System. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
- net.micro.atari8 - created Feb 1986
- net.micro.atari - created Nov 1982
- net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board (B8MB): http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

It appears to be all of the above, so I hope I got the right thing - I
bought one of these ebay# 260089346202

Found it, now i just have to wait for my cable to arrive to play it on
the elderly beast.
I'm keen to finally play this game, I'm thinking that it would be a
good port for the XBOX360 via arcade.

I was hoping there would be some mega-archives somewhere so you didn't
have to download one game at a time, 100 games would only be around
32MB or so. I do miss the days where you could do something great in
48K or even 8K.

It may be hard to find in some areas so, although it may be a little =
risky, your best bet is to buy internationally from Ebay, or better yet, =
some place in the US such as B&C, Best Electronics or Bravo Computers. =
I think I would try the latter as you SHOULD know that these people =
ARE reputable and so you should NOT have any problems dealing with =
them!

Again, these places have been in business for quite awhile and so you =
SHOULD be re-assured that they will NOT do you wrong and so this would =
probably be the BEST bet for getting what you need without getting your =
arm and leg ripped off from a bad Ebay deal or you pay through your =
teeth getting something from there!!! ALL the places mentioned above =
are VERY reasonable and so it's WORTH checking them out if you need =
something and DON'T want to be ripped off or have to pay an arm and a =
leg to get it!!!

I say... RESURRECT it!!!

I haven't looked recently, but there were a few sites that supported =
MULE and had a PC version of it and a couple were actually pretty =
good!!! I think I still have them on my old hd.

BUT that game was and *IS* still POPULAR!!! If you want to see how =
popular it is, try going to www.atariage.com and make a post there and =
see what kind of response you get from it! I think this is probably the =
biggest forum, on a website, in the US anyways, that have 8-bit and a =
mix of other users which probably WOULD be interested in this EXTREMELY =
popular game and it's a VERY active forum there!

I think it's probably in the Top 10 games of ALL time!!!

--- Nite Hacker

If you are using a PC emulator, your BEST bet... then you can get just =
about ANY game from the following site... www.atari.fandal.cz/games.php

If you DON'T have an emulator, Atari800Win Plus, try this link. This =
link has been down or changed, but at the moment, it's working!

This would be the BEST bet if you want to check games out and want to =
get back into the experience of the games WITHOUT paying ALOT to acquire =
the original games, equipment! However, if you STILL want to acquire =
the originals, that is HIGHLY understandable! BUT, in the meantime, you =
can use the emulator to check out games BEFORE you buy them and gives =
you a QUICK fix until you can get an original! See my post elsewhere in =
the forum for links to buying original games/equipment.

I like to get an original setup too... when I can. There is NOTHING =
like playing a game on an ORIGINAL setup!!!

--- Nite Hacker

I thought I was alone here, mate;-)

The SIO 2 PC is great stuff, makes life a whole lot easier. I built two
and put one inside my spare 800XL and the other hooked externally to my
130XE. I haven't used my 1050's in a while now.

Hey I'm only a 12hr drive from you ;^)

I'm running a 1980 built 800, you can't kill it with a stick, I have an
800XL for the few programs that require it and my old 400 is missing a
lot of keys so is in a box in the shed.

I'm hanging out to have all my proggies easily accessible.

The prices are good but the shipping is a killer to Australia, I keep
hoping to find some gear at a garage sale or similar over here, there
must be thousands of items mouldering away in peoples cupboards...

Jeez, just around the corner. So now there are 2 users in Aussie. Mine doesn't get a lot of use these days unfortunately. I have a 256K 800XL, 64k 800XL, 128k 130XE, 64k XEGS and a 64k 600XL. I have a pair of 1050's and a 850 interface plus a couple of tape drives. Also a Lynx, Jaguar, 2 Falcon030's (one with a CT2), TT030, MegaSTE, 1040STE, 520STM and about half a dozen STFM's. Hell, Atari is some serious business;-)

Makes the PC soooo much more useful. Being able to run progs directly from a directory is pretty cool.

Mark

 Well, as you said, you are in Australia and so you may be more limited =
in finding the stuff there?

US/Canada - especially US, would give you MUCH more options! How about =
making a trip here sometime? LOL

Well, good luck in finding stuff there... I hope you can find some =
people who do have stuff in their attics/garage, etc!

Maybe you should try posting a local ad once or twice? Or ads in =
stores, if you are allowed to do that? Never know who might read it and =
you might find someone who has stuff!

You got the right doohickey. I'd call it and APE/PRO
interface you got there.

>>I'm not sure a Prosystem interface will do what you want,

WRONG. You got the right doohickey.

That's the same one I have. It works as an APE/SIO2PC
cable and as a PRO cable. I've never used its' PRO
features, maybe once or twice.
I'm sure you'll find plenty of stuff to use with it.

There is an archive, several probably. This one is about 163mb.

http://24.166.209.185/Atari.7z

I'll keep it up for a day or so, grab it, it's mostly everything. I don't
have a big pipe, <insert weed joke here>, so be patient.

Thanks, will have a look. Just got another XL from e-bay so hopefully I
can swap some bits off that if necessary. Got one of the tape drives
working, but the others appear dead or dying.

So my total collection is now...

1 x 65XE
2 x 800XL
1 x 800

1 psu for the XE and XL and one dying

3 x 1050 drives - One which likes wiping some sort of gunk over every disk I put into it, one that works, but refuses to format everything and one that seems to be fine.

One, maybe two working supplies for these

2 x 410 tape drives one dead, one half working
Fortunately I can get away with cheap adapters for these
1 x XC12 working
1 x unbranded tape drive, half working, built in power supply

The 800 and XL seem to have a bit of difficulty reading tapes, there's a lot more background noise coming through the TV speaker whenever they load something which isn't there on the XE so god knows what that is (obviously they're so old their hearing is going! ;))

Everything's starting to look a bit fragile..

Both the RF and monitor outputs have no color in the signal. Any
ideas what could cause this? What chip does the video signal originate
from?

There is a pot on the pcb of the XEGS, which I believe you can access with a
small flatblade or plastic adjustment tool that adjusts the color. Could be
the pot is bad also. I would start there. You can put a meter on the pot
and check to see the value changes when turned.

Hi guys-

First off, let me say that this is interesting, and I also am acutely aware that both of you know loads more about RS-232 than I will ever know (or care to know. :)

But perhaps my experiences might be of some value. I tied to build my first MAX-232 SIO2PC interface from Nick's schematics and failed miserably. It was as Rick said a "first project." I ended up buying one from Nick, and as soon as I saw the actual assembled part, I knew that I could easily duplicate it. I used the interface some, but didn't particularly care for the SIO2PC software (sorry, Nick). Then a surge took out the (Harris 232 (IIRC) IC. I did have a good surge protector. Nothing else damaged -- just the 232. Since I wasn't real thrilled with the actual operation of SIO2PC anyway, I boxed it up. Several years later, I read about an improved version of software called "APE" and I also read about a new 1489 interface.

So I downloaded the APE trial version, and went to my local Radio Shack to get a 1489. No problem building the interface, but by now, there would have been no problem with a 232 interface, either. Downloaded the trial APE software, and whoa -- it didn't work. It was built correctly, but just wouldn't work properly. Through trial and error and some valuable assistance from Rick, I found it would work if nothing else was connected on the SIO chain. Then someone suggested that I might have better luck with a 14C89. I got some true 14C89's and they worked perfectly. I tried some 14C89 substitutes. Some worked perfectly, and some didn't. Subsequent to that I built several more interfaces, including 232's. I've lost another 232 interface to a surge, but have never lost a 14C89. Now, for simplicity, I use Steve's dual interface.

My conclusions are 1) a 232 *always* works, 2) a (true) 14C89 *always* works. 3) a 14C89 substitute may or may not work. I've used these with on-board serial ports and also good add-on serial cards, and have found no differences.

I should add a fourth conclusion: 4) APE is great; APE for Windows is *awesome* and keeps on getting better!

FWIW...

Geez what a bunch of tossers you all are - you don't like someones postings so
you try and get him evicted from the net, why not just use a kill file - you
DONT have to read his posts/threads now do you ?

Why is it the net is getting populated by the biggest bunch of self absorbed
little Hitlers ? You don't like someones posts so you bloody complain or mail
bomb them - grow up you bunch of fucking sad gits !

Richard.

: windering if there was anything you could do?

If he is not actively using tactics to avoid or sabotage killfiles
(posting from various systems, forging, massive crossposting to create
cross-newsgroup flame wars) then it should be quite easy to killfile
him.

It does seem that the frequency and the size of his posts are
approaching net abuse. However, IMHO, they aren't quite there yet. If
his postmaster were to act in this instance, it would raise troubling
censorship issues.

I've got god knows how many Lynxes, a dead jag with toilet seat and a
ton of games, had a TT030 when it came out, but sold it before it
became an anchor. Almost bought the flacon on ebay last month but
couldn't justify it. Had a lot of STs but they are all gone now...

There is a Jag on ebay australia atm. A toilet seat eh;-). If you ever
want to sell it..... BTW the TT030 and Falcon are great fun. Got a
TTM195 ECL monitor for my TT. Huge screen. Must plug that in again.

Hi Atari-istas!

Michael Current recommended I post to comp.sys.atari.8bit. Some of you

may know my early work on 8-bit Atari systems. I wrote Clowns and
Balloons for DataSoft, Cohen's Towers for DataMost, and a bunch of
others. The source code to these games is sitting in a large box in my
garage. The code is yearning to be released to the public domain. The
problem is I do not have a way to transfer the files from the original
5 1/4" floppy disks. I am searching for someone to transfer the files.
I will then make all of the files available to the public.

If this interests you then please contact me at fcohen@pushtotest.com
or by calling me at 408 374 7426.

Thanks!

-Frank Cohen

Great news, I'll help if none of your fellow country men can!

Or you could buy the cable I did for $30 if you wanted to have a go yourself.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system. Atari, headquartered at the time in Sunnyvale, California, USA, produced this line of computers from 1979-1992.

To see what Atari, Inc. is up to today, visit: http://www.atari.com/

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

Former (before 1987) Usenet newsgroups for Atari computer discussion:
net.micro.atari8 - created Feb 1986
net.micro.atari - created Nov 1982
net.micro - created Jan 1982

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated).
An archive of c.s.a.a posts and the guidelines for posting to c.s.a.a:
http://www.atariarchives.org/csaa/ Moderator: Kevin Savetz

comp.sys.atari.programmer
Programming on the Atari computer.

Why not send it to him for free? Seeing as he is giving something to
the community himself?

Has anyone out there successfully used programs like Action! under
Atari800WinPlus?

Specifically, it doesn't seem that the emulator recognizes Shift-Ctrl-key
commands used by this program, and probably many others.

As a follow-up, I immediately received 4 offers to do the transfer. I
am going to send a few source disks out to see how successful they
are. (These are 20 year old floppies after all.) I'll post what I get
back here.

Also, thank you to everyone for your kind and appreciative words. I
love the games and am so glad the community formed to support them.

Frank,

Thanks for offering to do this. It would be nice if more of the creators of vintage software would be willing to do this.

I have the equipment to do this - to convert physical disks into ATR disk images that can be used by emulators and distributed online. Do you have any idea of the number of disks that need to be converted?

Thanks.

Jason Harmon

I would have been happy to loan him the required items, but I got
the impression he just wanted the disks transferred, so thats what
I offered to do. ;)

Its also pretty common for someone to have a lot of disks to
transfer, but the hardware was left behind long ago.

GTIA and Antic are the two graphics chips.
Antic controls GTIA, so I'd guess GTIA is the
low level color controller.
I had a GTIA that wouldn't detect collisions

I've made a home page for the M.U.L.E. remake I'm working on:

   http://www.codenautics.com/openmule/

It includes a couple of screen shots, as well as a new hi-res animated
M.U.L.E. from our artist (Jeff Quan). Please have a look, and if you
have any input, I'd love to hear it.

Best,
- Joe

Hopefully there will be no big issues in transferring the disks, but
if there are -- *generally* an XF551 will read disks better than other
Atari drives due to better electronics/data separation. So if some
disks have "unreadable" sectors, don't necessarily throw in the towel.

That works both ways, Larry. I have disks my 551 won't read, the 1050 does
and vice versa. Also have a DTI duplicator in one, that reads others.
Luckily I have 6 drives (Indus probably read some too, that others don't) to
try out

Hi Vidar-
Yes, it certainly helps to be able have multiple drives (and sometimes
even set at slightly different speeds) to read disks that were not
written perfectly. I've run across a few old disks that caused me to
go through my whole "stable!"

Hi

I know this topic has been discussed in the "Dying 800XL" thread as
well, but that thread was rather long and my question is of a bit
different kind, so I decided to start another thread.

The problem is: few days ago, I got one 800XL (for a bottle of wine ;)
and it seems ok except for the fact, that right upon power-up, it goes
to memory test, which shows almost all squares red, so I guess my
problem is with the memory. So I've opened the machine, to check whether
some of the chips is getting hot - none of them does. So I guess I'll
have to replace all of them.

My question therefore is: The memory chips in my 800XL are labeled MT
4264-15 - which spare should I use? I'm able to get some 4164 for a
bargain price - will they do? Any suggestions on other suitable chips?
Another question - is their timing (I guess the -15 means 150ns)
critical or is it possible to replace them with chips with another timing?

I guess I'll leave the soldering to somebody more skilled, but anyway -
is soldering in some sockets and putting the new chips into sockets a
good or bad idea?

Is there anything other I should check prior to replacing the ram chips?

Many thanks for your answers.

Vit Herman

I'll say it once and i'll say it again, those MT ram chips are crap.

If it goes straight to memory test and shows red, i'm sure the problem is in
your RAM.

You can use 4164 DRAMS no problem, 150NS is fine, I think 80-150NS will do
you fine.

Be aware some DRAMS have a slow bleed effect, meaning if you turn your Atari
off and right back on, it might not come up correctly because the RAM has
not had enough time to bleed down to 0. Just be aware of this when you try
the bargain RAM out.

I would say if they aren't socketed to go ahead and replace them with sockets and try the RAM, that way if they don't work how you want then you can just buy the correct replacements and do a simple swap.

I'd be happy to do this for you, I just repaired Jason Harmon's 130XE and it's on its way back to him now. He had MT type RAM and I removed, socketed, and replaced the RAM.. Works like a champ.

E-Mail me.

Thomas

How does the OS do the self test if there's
no good RAM? If the original poster said that
all RAM blocks in the self test are red, I'd suspect
some other source of the problem.

If I have it right, clause 7 is in there so you could tell if a
receiving device is off. It was also there because some of the early
equipment used relays but that isn't the relevant point for this topic.
>
> The sender has to output at least +/-5V. The receiver has to

We are going to have to agree to disagree.

The topic is RS232 compatibility with the IBM, a clause 7 implementation of RS232. If you really want to pull out the rule book, there is no Ring Indicator in the RS232 standard ergo Nick's MAX232 version of the cable and software is not RS232 compliant. AH! but there is in the IBM implementation. If you want to say not all implementations of the RS232 standard follow clause 7, fine. If you want to say there are some after market boards that don't follow the full RS232 standard w/clause 7, fine but I would like to see an example.

In looking for a 1489 equivalent schematic I happened on a Mac site:
http://www.mactech.com/articles/mactech/Vol.01/01.08/SerialPortsasSlots/index.html

"The receivers do not operate in strict accordance with RS-232, since their input switching threshold is around +1 volt. Therefore these receivers will correctly respond not only to RS-232 input levels, but TTL level inputs also. Like the drivers, the output is inverted from the input."

I think this is the only site I have seen where they say where the 1489 switches. They did forget to mention clause 7 though.<sigh>

I take slight exception to their "do not operate in strict accordance with RS-232" A specification says what something should do, i.e. treat -3V as logic one and +3V as logic 0 which the Mac complies fully with. To use their reasoning everything that switches in the undefined(ignoring clause 7) "do not operate in strict accordance with RS-232" Of course everything switches somewhere between -3V and +3V!!! It is an engineering/design decision to decide where and at your discretion. If you choose to switch at 0V or +2V or -1V you are still in accordance with RS-232 standard.

> a perfect world.

I found the 1489 schematic.
http://www.onsemi.com/pub/Collateral/MC1489-D.PDF

Look at the input stage. Pay particular attention to the 3.8k resistor going to diode which is connected to ground. All the talk about -3 volts or -25 volts really doesn't make a difference to the circuit. Anything below the forward voltage of that diode is tits on a bull to use my father's expression. It is clamped the way the MPP joystick modem clamped their inputs except they used a zener to limit the high side voltage too. Very common way of doing things. I believe diode clamping like this is standard on just about every IC to protect against static

discharge.
>
> During the last years I read approx. one posting per year
> (here in this newsgroup and in web-forums) from someone having

This is WAY down from when 1489 SIO2PC/APE/Pro version cables became popular. Like I said about 70% of the people posting about SIO2PC were "This thing doesn't work."

I've offered to fix or exchange working cables to anyone who had trouble with either the 1489 or MAX. 100% of the problems I found were assembly. I stopped doing it when I put my 8 bit away maybe 5 years ago.

Just a side note, the 1489 stuff by everyone involved wasn't done to be perfect. The j131 or Tucker or Dyson or me or whoever were done because the people trying to make Nick's original MAX232 version couldn't do it. We are really talking first project, never seen a schematic type of person. I'm pretty sure that is why Steve puts up connection lists rather then schematics. When I did a 4049 version people complained they couldn't find the chip. The MAX232 was even tougher to find and cost $6 back then. When I did the 74LS00 version I got a lot of "What's that?"s The best solution ended up being "Go to Radio Shack and buy a 1489." That some people still have trouble making them, bad parts find their way into assemblies, the occasional diode with too high a forward voltage, does not surprise me. I've even had new cable that had an internal break and at least one with an internal short. The manufacturing fallout is really quite low compared to just about any other electrical device.

This is an obtuse point, but stick with it please and it may make sense. I Nick said it best: I forgot his exact words. Something like, 'The first one you build is exciting. After you build 10 or more it just becomes boring work." He priced the ones he made to discourage people from ordering from him. Likewise Steve Tucker said something similar in that he enjoys programming but doesn't like soldering APE/Pro cables => another high pricer. I know I was toast after making/fixing a bunch.

That the price dropped and people were willing to make the 1489 versions was an unforeseen bonus.

Judging from several sources..sales, newsgroups, chats, other sites...
I'd estimate only about 50 active users in the US/Canada. Maybe a few
hundred more in the rest of the world.
Probably a couple 1000 in the garage, attic, or closet with plans of
being used.

Victim to its own success? I find that an interesting statement.

I think there might be 50 users in the US that actively USE the Atari 8-bits
say for anything business related or getting on the internet. I think there
are many other gamers and tinkers however. And those people step in and out of
active use all the time.

If it were not for chatting, Newsgroups, and BBS's, my Atari 800 would only be
occationally used. For me, computers have always been about communicating.

It's the interaction with other people that make a platform fun for me. ;)

I am going to purchase a Atari 2600 off or ebay for nostalgia reasons
since I grew up on this. I have very limited space though and would
love to share it with my computer on my VGA lcd monitor.
My question, can this be done? I know the monitor is very much
overkill for it but is there an adaptor to adjust the output to this?

I grew up during the age of the Atari 400/800 and never owned one but
I see many cheap on Ebay now and have thought about buying one but
don't want to have to get a monitor as well. Is it possible to share
my pc's vga/dvi monitor with it. Is there any way to do this?
